ROYAL SOCKERLY RETURN OF THE REGISTRAR-GENERAL SCOTLAND

## OF HEALTH LIBREATHS, DEATHS AND MARRIAGES INFECTIOUS DISEASES

## NEW CLAIMS TO SICKNESS BENEFIT WEATHER REPORT

Week ended 4th January 1964

Vital Statistics totals from first week of the year—17 towns

	Live Births	Stillbirths	Marriages	Total Deaths	Deaths under 1 year
1964	853	9	457	775	44
1963	969	18	448	793	34
1962	1,026	30	449	908	25

In the Seventeen Principal Towns of Scotland, being those burghs which at the date of the 1961 Census had populations of over 30,000, there were registered during the week ended 4th January 1964, the births of 853 living children, and of 9 stillborn children, 457 marriages and 775 deaths. In the case of births, stillbirths and deaths the numbers are corrected to allow for usual residence. The equivalent annual birth-rate (living children only) is 17·1 per thousand of the population, the marriage-rate 9·2 and the death-rate 15·6. The number of stillbirths corresponds to a rate of 10 per thousand total births registered (including stillborn).

The birth-rate for the week is 1.5 less than in the previous week, and 3.8 below the five years' average. The marriage-rate is 0.9 more than in the previous week, but 0.5 below the average. The death-rate is 0.1 more than in the previous week, but 0.2 below the average.

The weekly death-rates in the individual towns ranged from 22.7 in Ayr to 7.8 in Motherwell & Wishaw.

In Glasgow the rate was 15.6 and in Edinburgh 16.7.

There were 2 death from the principal epidemic diseases—1 was due to influenza and 1 to meningococcal septicaemia.

There were 156 deaths attributed to coronary thrombosis and 135 to malignant neoplasms, 38 of which were of the respiratory system.

Deaths from respiratory diseases (other than tubercular, influenzal and malignant) numbered 101, and equalled an annual death-rate from these causes of 2.0 per thousand. This death-rate is 0.2 more than in the previous week, and 0.1 above the average.

Deaths of children aged less than one year numbered 44, being 2 more than in the previous week. Of these, 19 were aged 0-6 days and 4 were aged 7-27 days. Deaths of persons aged sixty-five years and over numbered 484, and are 3 fewer than in the previous

Deaths due to violence numbered 36, and are 6 fewer than in the previous week.

The number of new claims to sickness benefit under the National Insurance Acts made at Local Offices of the Ministry of Pensions & National Insurance in Scotland during the period ended 31st December 1963, was 41,194. The number of such claims made at the Seventeen Principal Towns is shown on the last page of this return.

The mean temperature for the towns from which returns were received was  $44.8^{\circ}$ , being  $6.6^{\circ}$  above that for the previous week, and  $5.6^{\circ}$  above the average for the corresponding

week in the period 1901-1930.

The mean rainfall was 1.33 inches, and the mean sunshine 1.5 hours.

### OF HBIRTHS, DEATHS AND MARRIAGES LIBRARY INFECTIOUS DISEASES

## NEW CLAIMS TO SICKNESS BENEFIT WEATHER REPORT

## Week ended 11th January 1964

Vital Statistics totals from first week of the year-17 towns

3 3 3 3 3 3 3 3 3 3 3 3 3 3 3 3 3 3 3 3	Live Births	Stillbirths	Marriages	Total Deaths	Deaths under 1 year
1964	2,025	34	684	1,507	74
1963	2,079	40	619	1,535	67
1962	2,173	50	620	1,756	64

In the Seventeen Principal Towns of Scotland, being those burghs which at the date of the 1961 Census had populations of over 30,000, there were registered during the week ended 11th January 1964, the births of 1,172 living children, and of 25 stillborn children, 227 marriages and 732 deaths. In the case of births, stillbirths and deaths the numbers are corrected to allow for usual residence. The equivalent annual birth-rate (living children only) is 23.6 per thousand of the population, the marriage-rate 4.6 and the death-rate 14.7. The number of stillbirths corresponds to a rate of 21 per thousand total births registered (including stillborn).

The birth-rate for the week is 6.5 more than in the previous week, and 1.2 above the five years' average. The marriage-rate is 4.6 less than in the previous week, but 0.2 above the average. The death-rate is 0.9 less than in the previous week, and 0.6 below the average.

The weekly death-rates in the individual towns ranged from 18.3 in Airdrie to 5.9 in Coatbridge.

In Glasgow the rate was 16.6 and in Edinburgh 14.4.

There were 5 deaths from the principal epidemic diseases—due to influenza.

There were 132 deaths attributed to coronary thrombosis and 116 to malignant neoplasms, 32 of which were of the respiratory system.

Deaths from respiratory diseases (other than tubercular, influenzal and malignant) numbered 115, and equalled an annual death-rate from these causes of 2.3 per thousand. This death-rate is 0.3 more than in the previous week, and 0.3 above the average.

Deaths of children aged less than one year numbered 30, being 14 fewer than in the previous week. Of these, 18 were aged 0-6 days and 1 was aged 7-27 days. Deaths of persons aged sixty-five years and over numbered 474, and are 10 fewer than in the previous

Deaths due to violence numbered 39, and are 3 more than in the previous week.

The number of new claims to sickness benefit under the National Insurance Acts made at Local Offices of the Ministry of Pensions & National Insurance in Scotland during the week ended 7th January 1964, was 18,883. The number of such claims made at the Seventeen Principal Towns is shown on the last page of this return.

The mean temperature for the towns from which returns were received was 38.9°, being 5.9° below that for the previous week, and 0.1° below the average for the corresponding week in the period 1901-1930.

The mean rainfall was 0.06 inch, and the mean sunshine 6.9 hours.

## NEW CLAIMS TO SICKNESS BENEFIT WEATHER REPORT

Week ended 18th January 1964

Vital Statistics totals from first week of the year—17 towns

	Live Births	Stillbirths	Marriages	Total Deaths	Deaths under 1 year
1964	3,079	57	842	2,133	103
1963	3,120	60	794	2,447	99
1962	3,261	70	773	2,541	99

In the Seventeen Principal Towns of Scotland, being those burghs which at the date of the 1961 Census had populations of over 30,000, there were registered during the week ended 18th January 1964, the births of 1,054 living children, and of 23 stillborn children, 158 marriages and 626 deaths. In the case of births, stillbirths and deaths the numbers are corrected to allow for usual residence. The equivalent annual birth-rate (living children only) is 21·2 per thousand of the population, the marriage-rate 3·2 and the death-rate 12·6. The number of stillbirths corresponds to a rate of 21 per thousand total births registered (including stillborn).

The birth-rate for the week is 2.4 less than in the previous week, but 0.1 above the five years' average. The marriage-rate is 1.4 less than in the previous week, and 0.5 below the average. The death-rate is 2.1 less than in the previous week, and 3.5 below the average.

The weekly death-rates in the individual towns ranged from 17.9 in Falkirk to 7.6 n Kirkcaldy.

In Glasgow and in Edinburgh the rate was 12.1.

There were 8 deaths from the principal epidemic diseases—6 were due to influenza, 1 to measles and 1 to meningococcal meningitis.

There were 124 deaths attributed to coronary thrombosis and 123 to malignant

neoplasms, 32 of which were of the respiratory system.

Deaths from respiratory diseases (other than tubercular, influenzal and malignant) numbered 77, and equalled an annual death-rate from these causes of 1.5 per thousand. This death-rate is 0.8 less than in the previous week, and 0.7 below the average.

Deaths of children aged less than one year numbered 29, being 1 fewer than in the previous week. Of these, 15 were aged 0-6 days and 4 were aged 7-27 days. Deaths of persons aged sixty-five years and over numbered 386, and are 88 fewer than in the previous week.

Deaths due to violence numbered 25, and are 14 fewer than in the previous week.

The number of new claims to sickness benefit under the National Insurance Acts made at Local Offices of the Ministry of Pensions & National Insurance in Scotland during the week ended 14th January 1964, was 27,450. The number of such claims made at the Seventeen Principal Towns is shown on the last page of this return.

The mean temperature for the towns from which returns were received was  $35.7^{\circ}$ , being  $3.2^{\circ}$  below that for the previous week, and  $2.1^{\circ}$  below the average for the corresponding

week in the period 1901–1930.

The mean rainfall was 0.18 inch, and the mean sunshine 11.1 hours.

Provisional figures for the year 1963 show that there were registered in Scotland 102,681 live births, 65,500 deaths and 39,653 marriages. The rates were 19.7, 12.6 and 7.6 respectively.

## ROYAL SO WHEKLY RETURN OF THE REGISTRAR-GENERAL LL: Promotion SCOTLAND

# INFECTIOUS DISEASES NEW CLAIMS TO SICKNESS BENEFIT WEATHER REPORT

### Week ended 25th January 1964

Vital Statistics totals from first week of the year—17 towns

	Live Births	Stillbirths	Marriages	Total Deaths	Deaths under 1 year
1964	4,168	83	1,046	2,820	126
1963	4,241	87	1,010	3,265	137
1962	4,282	84	1,002	3,248	118

In the Seventeen Principal Towns of Scotland, being those burghs which at the date of the 1961 Census had populations of over 30,000, there were registered during the week ended 25th January 1964, the births of 1,089 living children, and of 26 stillborn children, 204 marriages and 687 deaths. In the case of births, stillbirths and deaths the numbers are corrected to allow for usual residence. The equivalent annual birth-rate (living children only) is 21.9 per thousand of the population, the marriage-rate 4.1 and the death-rate 13.8. The number of stillbirths corresponds to a rate of 23 per thousand total births registered (including stillborn).

The birth-rate for the week is 0.7 more than in the previous week, and 0.7 above the five years' average. The marriage-rate is 0.9 more than in the previous week, but 0.5 below the average. The death-rate is 1.2 more than in the previous week, but 1.7 below the average.

The weekly death-rates in the individual towns ranged from 20.8 in Dunfermline to 10.8 in Coatbridge.

In Glasgow the rate was 12.9 and in Edinburgh 16.7.

There was 1 death from the principal epidemic diseases—due to influenza.

There were 145 deaths attributed to coronary thrombosis and 126 to malignant neoplasms, 31 of which were of the respiratory system.

Deaths from respiratory diseases (other than tubercular, influenzal and malignant) numbered 95, and equalled an annual death-rate from these causes of 1.9 per thousand. This death-rate is 0.4 more than in the previous week, but 0.2 below the average.

Deaths of children aged less than one year numbered 23, being 6 fewer than in the previous week. Of these, 14 were aged 0–6 days and 2 were aged 7–27 days. Deaths of persons aged sixty-five years and over numbered 457, and are 71 more than in the previous week.

Deaths due to violence numbered 29, and are 4 more than in the previous week.

The number of new claims to sickness benefit under the National Insurance Acts made at Local Offices of the Ministry of Pensions & National Insurance in Scotland during the week ended 21st January 1964, was 21,829. The number of such claims made at the Seventeen Principal Towns is shown on the last page of this return.

The mean temperature for the towns from which returns were received was  $39.8^{\circ}$ , being  $4.1^{\circ}$  above that for the previous week, and  $0.5^{\circ}$  above the average for the corresponding week in the period 1901-1930.

The mean rainfall was 0.08 inch, and the mean sunshine 13.7 hours.

NOTE.—The averages used for comparison are, except where otherwise stated, the mean of the comparable rates in the Principal Towns in the corresponding week of the five preceding years.

## WEEKLY RETURN OF THE REGISTRAR-GENERAL SCOTLAND

# BIRTHS, DEATHS AND MARRIAGES INFECTIOUS DISEASES NEW CLAIMS TO SICKNESS BENEFIT WEATHER REPORT

WE First Suff Week ended 1st February 1964

Tor the	Vital Statistic	s totals from fi	rst week of the	year—17 towns	5
and a	Live Births	Stillbirths	Marriages	Total Deaths	Deaths under 1 year
1964	5,158	113	1,316	3,444	145
1963	5,227	103	1,261	4,065	165
1962	5,316	102	1,284	3,927	160

In the Seventeen Principal Towns of Scotland, being those burghs which at the date of the 1961 Census had populations of over 30,000, there were registered during the week ended 1st February 1964, the births of 990 living children, and of 30 stillborn children, 270 marriages and 624 deaths. In the case of births, stillbirths and deaths the numbers are corrected to allow for usual residence. The equivalent annual birth-rate (living children only) is 19·9 per thousand of the population, the marriage-rate 5·4 and the death-rate 12·5. The number of stillbirths corresponds to a rate of 29 per thousand total births registered (including stillborn).

The birth-rate for the week is 2.0 less than in the previous week, and 0.8 below the five years' average. The marriage-rate is 1.3 more than in the previous week, but the same as the average. The death-rate is 1.3 less than in the previous week, and 2.9 below the average.

The weekly death-rates in the individual towns ranged from 18.4 in Ayr to 7.4 in Clydebank.

In Glasgow the rate was 13.3 and in Edinburgh 12.5.

There were no deaths from the principal epidemic diseases.

There were 128 deaths attributed to coronary thrombosis and 114 to malignant neoplasms, 34 of which were of the respiratory system.

Deaths from respiratory diseases (other than tubercular, influenzal and malignant) numbered 69, and equalled an annual death-rate from these causes of 1·4 per thousand. This death-rate is 0·5 less than in the previous week, and 0·8 below the average.

Deaths of children aged less than one year numbered 19, being 4 fewer than in the previous week. Of these, 13 were aged 0-6 days and 1 was aged 7-27 days. Deaths of persons aged sixty-five years and over numbered 390, and are 67 fewer than in the previous week.

Deaths due to violence numbered 31, and are 2 more than in the previous week.

The number of new claims to sickness benefit under the National Insurance Acts made at Local Offices of the Ministry of Pensions & National Insurance in Scotland during the week ended 28th January 1964, was 21,158. The number of such claims made at the Seventeen Principal Towns is shown on the last page of this return.

The mean temperature for the towns from which returns were received was  $43.6^{\circ}$ , being  $3.8^{\circ}$  above that for the previous week, and  $4.7^{\circ}$  above the average for the corresponding week in the period 1901–1930.

The mean rainfall was 1.02 inches, and the mean sunshine 11.6 hours.

## WEEKLY RETURN OF THE REGISTRAR-GENERAL SCOTLAND

# BIRTHS, DEATHS AND MARRIAGES INFECTIOUS DISEASES NEW CLAIMS TO SICKNESS BENEFIT WEATHER REPORT

Week ended 8th February 1964

Vital Statistics totals from first week of the year—17 towns

THE ROLL CONJETY for the Constion

	ĺ	1		1	1 4 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1
	Live Births	Stillbirths	Marriages	Total Deaths	Deaths under 1 year
1964	6,208	147	1,625	4,055	172
1963	6,203	134	1,554	4,919	207
1962	6,359	125	1,561	4,567	189

In the Seventeen Principal Towns of Scotland, being those burghs which at the date of the 1961 Census had populations of over 30,000, there were registered during the week ended 8th February 1964, the births of 1,050 living children, and of 34 stillborn children, 309 marriages and 611 deaths. In the case of births, stillbirths and deaths the numbers are corrected to allow for usual residence. The equivalent annual birth-rate (living children only) is 21·1 per thousand of the population, the marriage-rate 6·2 and the death-rate 12·3. The number of stillbirths corresponds to a rate of 31 per thousand total births registered (including stillborn).

The birth-rate for the week is 1.2 more than in the previous week, and 1.1 above the five years' average. The marriage-rate is 0.8 more than in the previous week, and 0.1 above the average. The death-rate is 0.2 less than in the previous week, and 3.8 below the average.

The weekly death-rates in the individual towns ranged from 22.7 in Kilmarnock to 6.1 in Airdrie.

In Glasgow and in Edinburgh the rate was 12.6.

There was 1 death from the principal epidemic diseases—due to influenza.

There were 129 deaths attributed to coronary thrombosis and 119 to malignant neoplasms, 40 of which were of the respiratory system.

Deaths from respiratory diseases (other than tubercular, influenzal and malignant) numbered 66, and equalled an annual death-rate from these causes of 1·3 per thousand. This death-rate is 0·1 less than in the previous week, and 1·4 below the average.

Deaths of children aged less than one year numbered 27, being 8 more than in the previous week. Of these, 12 were aged 0-6 days and 2 were aged 7-27 days. Deaths of persons aged sixty-five years and over numbered 371, and are 19 fewer than in the previous week.

Deaths due to violence numbered 36, and are 5 more than in the previous week.

The number of new claims to sickness benefit under the National Insurance Acts made at Local Offices of the Ministry of Pensions & National Insurance in Scotland during the week ended 4th February 1964, was 21,025. The number of such claims made at the Seventeen Principal Towns is shown on the last page of this return.

The mean temperature for the towns from which returns were received was  $39.9^{\circ}$ , being  $3.7^{\circ}$  below that for the previous week, but  $1.2^{\circ}$  above the average for the corresponding week in the period 1901–1930.

The mean rainfall was 0.26 inch, and the mean sunshine 18.8 hours.

WEEKLY RETURN OF CASES OF INFECTIOUS DISEASES notified to the Scottish Home and Health Department

### Week ended 15th February 1964

Vital Statistics totals from first week of the year-17 towns

	Live Births	Stillbirths	Marriages	Total Deaths	Deaths under 1 year
1964	7,228	163	2,046	4,658	202
1963	7,243	164	1,841	5,763	233
1962	7,344	151	1,875	5,207	213

In the Seventeen Principal Towns of Scotland, being those burghs which at the date of the 1961 Census had populations of over 30,000, there were registered during the week ended 15th February 1964, the births of 1,020 living children, and of 16 stillborn children, 421 marriages and 603 deaths. In the case of births, stillbirths and deaths the numbers are corrected to allow for usual residence. The equivalent annual birth-rate (living children only) is 20.5 per thousand of the population, the marriage-rate 8.5 and the death-rate 1711. The number of stillbirths corresponds to a rate of 15 per thousand-total births registered (including stillborn).

The birth-rate for the week is 0.6 less than in the previous week, and 0.4 below the five years' average. The marriage-rate is 2.3 more than in the previous week, and 1.3 above the average. The death-rate is 0.2 less than in the previous week, and 5.1 below the average.

The weekly death-rates in the individual towns ranged from 18:3 in Airdrie to 6:4

In Glasgow the rate was 11.8 and in Edinburgh 13.0.

There was 1 death from the principal epidemic diseases—due to influenza.

There were 121 deaths attributed to coronary thrombosis and 113 to malignant neoplasms, 37 of which were of the respiratory system.

Deaths from respiratory diseases (other than tubercular, influenzal and malignant) numbered 69, and equalled an annual death-rate from these causes of 1.4 per thousand. This death-rate is 0.1 more than in the previous week, but 1.6 below the average.

Deaths of children aged less than one year numbered 30, being 3 more than in the previous week. Of these, 16 were aged 0-6 days and 6 were aged 7-27 days. Deaths of persons aged sixty-five years and over numbered 383, and are 12 more than in the previous week.

Deaths due to violence numbered 36, and are the same as in the previous week.

The number of new claims to sickness benefit under the National Insurance Acts made at Local Offices of the Ministry of Pensions & National Insurance in Scotland during the week ended 11th February 1964, was 20,187. The number of such claims made at the Seventeen Principal Towns is shown on the last page of this return.

The mean temperature for the towns from which returns were received was  $40.9^{\circ}$ , being  $1.0^{\circ}$  above that for the previous week, and  $2.5^{\circ}$  above the average for the corresponding week in the period 1901–1930.

The mean rainfall was 0.04 inch, and the mean sunshine 7.3 hours.

WEEKLY RETURN OF CASES OF INFECTIOUS DISEASES notified to the Scottish Home and Health Department

E ROYAL SOWIERKLY RETURN OF THE REGISTRAR-GENERAL SCOTLAND

# INFECTIOUS DISEASES NEW CLAIMS TO SICKNESS BENEFIT WEATHER REPORT

Week ended 22nd February 1964

Vital Statistics totals from first week of the year-17 towns

	Live Births	Stillbirths	Marriages	Total Deaths	Deaths under 1 year
1964	8,221	176	2,299	5,255	234
1963	8,311	186	2,211	6,697	277
1962	8,396	179	2,232	5,859	258

In the Seventeen Principal Towns of Scotland, being those burghs which at the date of the 1961 Census had populations of over 30,000, there were registered during the week ended 22nd February 1964, the births of 993 living children, and of 13 stillborn children, 253 marriages and 597 deaths. In the case of births, stillbirths and deaths the numbers are corrected to allow for usual residence. The equivalent annual birth-rate (living children only) is 20·1 per thousand of the population, the marriage-rate 5·1 and the death-rate 12·1. The number of stillbirths corresponds to a rate of 13 per thousand total births registered (including stillborn).

The birth-rate for the week is 0.6 less than in the previous week, and 0.9 below the five years' average. The marriage-rate is 3.4 less than in the previous week, and 2.0 below the average. The death-rate is 0.1 less than in the previous week, and 4.5 below the average.

The weekly death-rates in the individual towns ranged from 18.5 in Ayr to 8.5 in Coatbridge.

In Glasgow the rate was 11.3 and in Edinburgh 13.1.

There was 1 death from the principal epidemic diseases—due to influenza.

There were 118 deaths attributed to coronary thrombosis and 122 to malignant neoplasms, 38 of which were of the respiratory system.

Deaths from respiratory diseases (other than tubercular, influenzal and malignant) numbered 58, and equalled an annual death-rate from these causes of 1·2 per thousand. This death-rate is 0·2 less than in the previous week, and 1·6 below the average.

Deaths of children aged less than one year numbered 32, being 2 more than in the previous week. Of these, 21 were aged 0-6 days and 2 were aged 7-27 days. Deaths of persons aged sixty-five years and over numbered 369, and are 14 fewer than in the previous week.

Deaths due to violence numbered 32, and are 4 fewer than in the previous week.

The number of new claims to sickness benefit under the National Insurance Acts made at Local Offices of the Ministry of Pensions & National Insurance in Scotland during the week ended 18th February 1964, was 19,992. The number of such claims made at the Seventeen Principal Towns is shown on the last page of this return.

The mean temperature for the towns from which returns were received was  $33.8^{\circ}$ , being  $7.1^{\circ}$  below that for the previous week, and  $5.3^{\circ}$  below the average for the corresponding week in the period 1901–1930.

The mean rainfall was 0.17 inch, and the mean sunshine 17.8 hours.

NOTE.—The averages used for comparison are, except where otherwise stated, the mean of the comparable rates in the Principal Towns in the corresponding week of the five preceding years.

or the Premotion
OF HEALTH
LIBRARY

Week ended 29th February 1964

Vital Statistics totals from first week of the year—17 towns

	Live Births	Stillbirths	Marriages	Total Deaths	Deaths under 1 year
1964	9,316	199	2,590	5,855	269
1963	9,355	210	2,845	7,642	308
1962	9,446	197	2,763	6,565	295

In the Seventeen Principal Towns of Scotland, being those burghs which at the date of the 1961 Census had populations of over 30,000, there were registered during the week ended 29th February 1964, the births of 1,095 living children, and of 23 stillborn children, 291 marriages and 600 deaths. In the case of births, stillbirths and deaths the numbers are corrected to allow for usual residence. The equivalent annual birth-rate (living children only) is 22·2 per thousand of the population, the marriage-rate 5·9 and the death-rate 12·2. The number of stillbirths corresponds to a rate of 21 per thousand total births registered (including stillborn).

The birth-rate for the week is 0.1 more than in the previous week, and 1.3 above the five years' average. The marriage-rate is 0.8 more than in the previous week, but 4.3 below the average. The death-rate is 0.1 more than in the previous week, but 4.2 below the average.

The weekly death-rates in the individual towns ranged from 20.8 in Ayr to 5.4 in

Kilmarnock.

In Glasgow the rate was 12.3 and in Edinburgh 13.2.

There were no deaths from the principal epidemic diseases.

There were 137 deaths attributed to coronary thrombosis and 122 to malignant neoplasms, 45 of which were of the respiratory system.

Deaths from respiratory diseases (other than tubercular, influenzal and malignant) numbered 61, and equalled an annual death-rate from these causes of 1·2 per thousand. This death-rate is the same as in the previous week, but 1·3 below the average.

Deaths of children aged less than one year numbered 35, being 3 more than in the previous week. Of these, 20 were aged 0-6 days and 4 were aged 7-27 days. Deaths of persons aged sixty-five years and over numbered 371, and are 2 more than in the previous week.

Deaths due to violence numbered 27, and are 5 fewer than in the previous week.

The number of new claims to sickness benefit under the National Insurance Acts made at Local Offices of the Ministry of Pensions & National Insurance in Scotland during the week ended 25th February 1964, was 21,211. The number of such claims made at the Seventeen Principal Towns is shown on the last page of this return.

The mean temperature for the towns from which returns were received was 43.7°, being 9.9° above that for the previous week, and 3.5° above the average for the corresponding week in the period 1901–1930.

The mean rainfall was 0.57 inch, and the mean sunshine 14.3 hours.

## OF HEARIRTHS, DEATHS AND MARRIAGES LIBRARY INFECTIOUS DISEASES

## NEW CLAIMS TO SICKNESS BENEFIT WEATHER REPORT

### Week ended 7th March 1964

Vital Statistics totals from first week of the year-17 towns

	Live Births	Stillbirths	Marriages	Total Deaths	Deaths under 1 year
1964	10,375	219	2,927	6,452	303
1963	10,435	235	3,352	8,625	342
1962	10,547	222	3,571	7,239	318

In the Seventeen Principal Towns of Scotland, being those burghs which at the date of the 1961 Census had populations of over 30,000, there were registered during the week ended 7th March 1964, the births of 1,059 living children, and of 20 stillborn children, 337 marriages and 597 deaths. In the case of births, stillbirths and deaths the numbers are corrected to allow for usual residence. The equivalent annual birth-rate (living children only) is 21.5 per thousand of the population, the marriage-rate 6.8 and the death-rate 12.1. The number of stillbirths corresponds to a rate of 19 per thousand total births registered (including stillborn).

The birth-rate for the week is 0.7 less than in the previous week, but 0.1 above the five years' average. The marriage-rate is 0.9 more than in the previous week, but 4.2 below the average. The death-rate is 0.1 less than in the previous week, and 3.3 below the average.

The weekly death-rates in the individual towns ranged from 21.3 in Airdrie to 6.9 in Falkirk.

In Glasgow the rate was 11.9 and in Edinburgh 12.4.

There were no deaths from the principal epidemic diseases.

There were 132 deaths attributed to coronary thrombosis and 113 to malignant neoplasms, 30 of which were of the respiratory system.

Deaths from respiratory diseases (other than tubercuiar, influenzal and malignant) numbered 68, and equalled an annual death-rate from these causes of 1.4 per thousand. This death-rate is 0.2 more than in the previous week, but 0.8 below the average.

Deaths of children aged less than one year numbered 34, being 1 fewer than in the previous week. Of these, 17 were aged 0-6 days and 6 were aged 7-27 days. Deaths of persons aged sixty-five years and over numbered 363, and are 8 fewer than in the previous week.

Deaths due to violence numbered 28, and are 1 more than in the previous week.

The number of new claims to sickness benefit under the National Insurance Acts made at Local Offices of the Ministry of Pensions & National Insurance in Scotland during the week ended 3rd March 1964, was 21,887. The number of such claims made at the Seventeen Principal Towns is shown on the last page of this return.

The mean temperature for the towns from which returns were received was  $39.7^{\circ}$ , being  $4.0^{\circ}$  below that for the previous week, but  $0.1^{\circ}$  above the average for the corresponding week in the period 1901-1930.

The mean rainfall was 0.08 inch, and the mean sunshine 14.9 hours.

ROYAL SOCWERRLY RETURN OF THE REGISTRAR-GENERAL SCOTLAND

## INFECTIOUS DISEASES NEW CLAIMS TO SICKNESS BENEFIT WEATHER REPORT

### Week ended 14th March 1964

Vital Statistics totals from first week of the year-17 towns

	Live Births	Stillbirths	Marriages	Total Deaths	Deaths under 1 year
1964	11,399	236	3,454	7,050	329
1963	11,512	252	3,856	9,558	384
1962	11,650	245	4,096	7,959	355

In the Seventeen Principal Towns of Scotland, being those burghs which at the date of the 1961 Census had populations of over 30,000, there were registered during the week ended 14th March 1964, the births of 1,024 living children, and of 17 stillborn children, 527 marriages and 598 deaths. In the case of births, stillbirths and deaths the numbers are corrected to allow for usual residence. The equivalent annual birth-rate (living children only) is 20·7 per thousand of the population, the marriage-rate 10·7 and the death-rate 12·1. The number of stillbirths corresponds to a rate of 16 per thousand total births registered (including stillborn).

The birth-rate for the week is 0.8 less than in the previous week, and 0.4 below the five years' average. The marriage-rate is 3.9 more than in the previous week, and 0.2 above the average. The death-rate is the same as in the previous week, but 2.3 below the average.

The weekly death-rates in the individual towns ranged from 18·1 in Hamilton to 7·6 in Airdrie.

In Glasgow the rate was 12.1 and in Edinburgh 12.4.

There was 1 death from the principal epidemic diseases due to influenza.

There were 129 deaths attributed to coronary thrombosis and 112 to malignant neoplasms, 42 of which were of the respiratory system.

Deaths from respiratory diseases (other than tubercular, influenzal and malignant) numbered 62, and equalled an annual death-rate from these causes of 1·3 per thousand. This death-rate is 0·1 less than in the previous week, and 0·5 below the average.

Deaths of children aged less than one year numbered 26, being 8 fewer than in the previous week. Of these, 14 were aged 0-6 days and 3 were aged 7-27 days. Deaths of persons aged sixty-five years and over numbered 363, and are the same as in the previous week.

Deaths due to violence numbered 37, and are 9 more than in the previous week.

The number of new claims to sickness benefit under the National Insurance Acts made at Local Offices of the Ministry of Pensions & National Insurance in Scotland during the week ended 10th March 1964, was 20,946. The number of such claims made at the Seventeen Principal Towns is shown on the last page of this return.

The mean temperature for the towns from which returns were received was  $40.8^{\circ}$ , being  $1.1^{\circ}$  above that for the previous week, but  $0.2^{\circ}$  below the average for the corresponding week in the period 1901–1930.

The mean rainfall was 0.92 inch, and the mean sunshine 12.3 hours.

NOTE.—The averages used for comparison are, except where otherwise stated, the mean of the comparable rates in the Principal Towns in the corresponding week of the five preceding years.

WEATHER REPORT

Week ended 21st March 1964

LIBRAR	Y Vital Statistic	es totals from fi	rst week of the	year—17 towns	s
AND MANUAL TO SERVICE OF THE PARTY OF THE PA	Live Births	Stillbirths	Marriages	Total Deaths	Deaths under 1 year
1964	12,472	257	4,023	7,693	365
1963	12,626	272	4,480	10,293	417
1962	12,752	267	4,684	8,721	387

In the Seventeen Principal Towns of Scotland, being those burghs which at the date of the 1961 Census had populations of over 30,000, there were registered during the week ended 21st March 1964, the births of 1,073 living children, and of 21 stillborn children, 569 marriages and 643 deaths. In the case of births, stillbirths and deaths the numbers are corrected to allow for usual residence. The equivalent annual birth-rate (living children only) is 21.7 per thousand of the population, the marriage-rate 11.5 and the death-rate 13.0. The number of stillbirths corresponds to a rate of 19 per thousand total births registered (including stillborn).

The birth-rate for the week is 1.0 more than in the previous week, but 0.3 below the five years' average. The marriage-rate is 0.8 more than in the previous week, but 1.6 below the average. The death-rate is 0.9 more than in the previous week, but 0.9 below the average.

The weekly death-rates in the individual towns ranged from 16.7 in Dundee to 6.1 in Airdrie.

In Glasgow the rate was 13.7 and in Edinburgh 13.4.

There were 2 deaths from the principal epidemic diseases 1 was due to influenza and 1 to meningococcal septicaemia.

There were 146 deaths attributed to coronary thrombosis and 128 to malignant

neoplasms, 41 of which were of the respiratory system.

Deaths from respiratory diseases (other than tubercular, influenzal and malignant) numbered 56, and equalled an annual death-rate from these causes of 1·1 per thousand. This death-rate is 0·2 less than in the previous week, and 0·5 below the average.

Deaths of children aged less than one year numbered 36, being 10 more than in the previous week. Of these, 24 were aged 0-6 days and 3 were aged 7-27 days. Deaths of persons aged sixty-five years and over numbered 414, and are 51 more than in the previous

Deaths due to violence numbered 25, and are 12 fewer than in the previous week.

The number of new claims to sickness benefit under the National Insurance Acts made at Local Offices of the Ministry of Pensions & National Insurance in Scotland during the week ended 17th March 1964, was 21,081. The number of such claims made at the Seventeen Principal Towns is shown on the last page of this return.

The mean temperature for the towns from which returns were received was 36.4°, being 4.4° below that for the previous week, and 4.4° below the average for the corresponding

week in the period 1901-1930.

The mean rainfall was 0.97 inch, and the mean sunshine 7.4 hours.

## NEW CLAIMS TO SICKNESS BENEFIT WEATHER REPORT

### Week ended 28th March 1964

Vital Statistics totals from first week of the year-17 towns Live Births Stillbirths Marriages Total Deaths Deaths under 1 year 4,819 1964 13,418 273 8,279 387 286 5.394 1963 13,717 10,987 438

5,637

9,386

In the Seventeen Principal Towns of Scotland, being those burghs which at the date of the 1961 Census had populations of over 30,000, there were registered during the week ended 28th March 1964, the births of 946 living children, and of 16 stillborn children, 796 marriages and 586 deaths. In the case of births, stillbirths and deaths the numbers are corrected to allow for usual residence. The equivalent annual birth-rate (living children only) is 19·2 per thousand of the population, the marriage-rate 16·1 and the death-rate 11·9. The number of stillbirths corresponds to a rate of 17 per thousand total births registered (including stillborn).

The birth-rate for the week is 2.5 less than in the previous week, and 1.9 below the five years' average. The marriage-rate is 4.6 more than in the previous week, but 3.9 below the average. The death-rate is 1.1 less than in the previous week, and 1.2 below the average.

The weekly death-rates in the individual towns ranged from 18·2 in Greenock to 4·6 in Airdrie.

In Glasgow the rate was 11.5 and in Edinburgh 12.2.

There was 1 death from the principal epidemic diseases due to influenza.

282

There were 132 deaths attributed to coronary thrombosis and 111 to malignant

neoplasms, 31 of which were of the respiratory system.

1962

13,869

Deaths from respiratory diseases (other than tubercular, influenzal and malignant) numbered 51, and equalled an annual death-rate from these causes of 1.0 per thousand. This death-rate is 0.1 less than in the previous week, and 0.4 below the average.

Deaths of children aged less than one year numbered 22, being 14 fewer than in the previous week. Of these, 11 were aged 0-6 days and 2 were aged 7-27 days. Deaths of persons aged sixty-five years and over numbered 373, and are 41 fewer than in the previous week.

Deaths due to violence numbered 32, and are 7 more than in the previous week.

The number of new claims to sickness benefit under the National Insurance Acts made at Local Offices of the Ministry of Pensions & National Insurance in Scotland during the week ended 24th March 1964, was 21,916. The number of such claims made at the Seventeen Principal Towns is shown on the last page of this return.

The mean temperature for the towns from which returns were received was  $41.3^{\circ}$ , being  $4.9^{\circ}$  above that for the previous week, but  $1.0^{\circ}$  below the average for the corresponding week in the period 1901-1930.

The mean rainfall was 0.96 inch, and the mean sunshine 12.7 hours.

TE ROYAL SOCIETY WEATHER REPORT

Week ended 4th April 1964

TATER . 13 YVital Statistics totals from first week of the year-17 towns

				7000	
	Live Births	Stillbirths	Marriages	Total Deaths	Deaths under 1 year
1964	14,639	295	5,985	8,908	409
1963	14,729	305	6,628	11,645	• 467
1962	14,993	298	6,941	10,150	444

In the Seventeen Principal Towns of Scotland, being those burghs which at the date of the 1961 Census had populations of over 30,000, there were registered during the week ended 4th April 1964, the births of 1,221 living children, and of 22 stillborn children, 1,166 marriages and 629 deaths. In the case of births, stillbirths and deaths the numbers are corrected to allow for usual residence. The equivalent annual birth-rate (living children only) is 24.7 per thousand of the population, the marriage-rate 23.6 and the death-rate 12.7. The number of stillbirths corresponds to a rate of 18 per thousand total births registered (including stillborn).

The birth-rate for the week is 5.5 more than in the previous week, and 2.3 above the five years' average. The marriage-rate is 7.5 more than in the previous week, but 1.7 below the average. The death-rate is 0.8 more than in the previous week, but 0.6 below the average.

The weekly death-rates in the individual towns ranged from 15.2 in Perth, Falkirk and in Airdrie to 6.4 in Motherwell and Wishaw.

In Glasgow the rate was 14.7 and in Edinburgh 13.1.

There was 1 death from the principal epidemic diseases due to meningococcal septicaemia.

There were 130 deaths attributed to coronary thrombosis and 132 to malignant

neoplasms, 33 of which were of the respiratory system.

Deaths from respiratory diseases (other than tubercular, influenzal and malignant) numbered 66, and equalled an annual death-rate from these causes of 1.3 per thousand. This death-rate is 0.3 more than in the previous week, but the same as the average.

Deaths of children aged less than one year numbered 22, being the same as in the previous week. Of these, 11 were aged 0-6 days and 2 were aged 7-27 days. Deaths of persons aged sixty-five years and over numbered 409, and are 36 more than in the previous

Deaths due to violence numbered 21, and are 11 fewer than in the previous week.

The number of new claims to sickness benefit under the National Insurance Acts made at Local Offices of the Ministry of Pensions & National Insurance in Scotland during the week ended 31st March 1964, was 19,866. The number of such claims made at the Seventeen Principal Towns is shown on the last page of this return.

The mean temperature for the towns from which returns were received was 40.2°, being 1.1 below that for the previous week, and 2.9° below the average for the corresponding

week in the period 1901-1930.

The mean rainfall was 0.03 inch, and the mean sunshine 19.4 hours.

NOTE.—The averages used for comparison are, except where otherwise stated, the mean of the comparable rates in the Principal Towns in the corresponding week of the five preceding years.

### WEEKLY RETURN OF THE REGISTRAR-GENERAL SCOTLAND

## BIRTHS, DEATHS AND MARRIAGES INFECTIOUS DISEASES NEW CLAIMS TO SICKNESS BENEFIT

VAL CORIETY WEATHER REPORT

E ROYAL COCIETY or the Promotion OF HEAL (H

Week ended 11th April 1964

Wital Statistics totals from first week of the year—17 towns

4.3.4	Live Births	Stillbirths	Marriages	Total Deaths	Death and a fact
	Live Births	Stilloutins		Total Deaths	Deaths under 1 year
1964	15,662	320	7,074	9,549	438
1963	15,572	319	6,826	12,218	495
				10.707	
1962	15,993	322	7,099	10,797	475

In the Seventeen Principal Towns of Scotland, being those burghs which at the date of the 1961 Census had populations of over 30,000, there were registered during the week ended 11th April 1964, the births of 1,023 living children, and of 25 stillborn children, 1,089 marriages and 641 deaths. In the case of births, stillbirths and deaths the numbers are corrected to allow for usual residence. The equivalent annual birth-rate (living children only) is 20·7 per thousand of the population, the marriage-rate 22·1 and the death-rate 13·0. The number of stillbirths corresponds to a rate of 24 per thousand total births registered (including stillborn).

The birth-rate for the week is 4.0 less than in the previous week, but 2.1 above the five years' average. The marriage-rate is 1.5 less than in the previous week, but 14.4 above the average. The death-rate is 0.3 more than in the previous week, and 0.6 above the average.

The weekly death-rates in the individual towns ranged from 24.8 in Falkirk to 8.7 in Kilmarnock.

In Glasgow the rate was 12.9 and in Edinburgh 13.5.

There was 1 death from the principal epidemic diseases—due to measles.

There were 147 deaths attributed to coronary thrombosis and 120 to malignant neoplasms, 26 of which were of the respiratory system.

Deaths from respiratory diseases (other than tubercular, influenzal and malignant) numbered 67, and equalled an annual death-rate from these causes of 1·4 per thousand. This death-rate is 0·1 more than in the previous week, and 0·2 above the average.

Deaths of children aged less than one year numbered 29, being 7 more than in the previous week. Of these, 19 were aged 0-6 days and 2 were aged 7-27 days. Deaths of persons aged sixty-five years and over numbered 396, and are 13 fewer than in the previous week.

Deaths due to violence numbered 34, and are 13 more than in the previous week.

The number of new claims to sickness benefit under the National Insurance Acts made at Local Offices of the Ministry of Pensions & National Insurance in Scotland during the week ended 7th April 1964, was 21,213. The number of such claims made at the Seventeen Principal Towns is shown on the last page of this return.

The mean temperature for the towns from which returns were received was  $46.3^{\circ}$ , being  $6.1^{\circ}$  above that for the previous week, and  $2.3^{\circ}$  above the average for the corresponding

week in the period 1901-1930.

The mean rainfall was 0.45 inch, and the mean sunshine 29.6 hours.

WEEKLY RETURN OF CASES OF INFECTIOUS DISEASES notified to the Scottish Home and Health Department

### NEW CLAIMS TO SICKNESS BENEFIT WEATHER REPORT

Week ended 18th April 1964

Vital Statistics totals from first week of the year-17 towns

	1				1
	Live Births	Stillbirths	Marriages	Total Deaths	Deaths under 1 year
1964	16,700	337	7,375	10,158	467
1963	16,713	348	7,078	12,873	520
1962	16,825	337	7,230	11,417	505

In the Seventeen Principal Towns of Scotland, being those burghs which at the date of the 1961 Census had populations of over 30,000, there were registered during the week ended 18th April 1964, the births of 1,038 living children, and of 17 stillborn children, 301 marriages and 609 deaths. In the case of births, stillbirths and deaths the numbers are corrected to allow for usual residence. The equivalent annual birth-rate (living children only) is 21.0 per thousand of the population, the marriage-rate 6.1 and the death-rate 12.3. The number of stillbirths corresponds to a rate of 16 per thousand total births registered (including stillborn).

The birth-rate for the week is 0.3 more than in the previous week, and 0.2 above the five years' average. The marriage-rate is 14.0 less than in the previous week, but 1.8 above the average. The death-rate is 0.7 less than in the previous week, but the same as the average.

The weekly death-rates in the individual towns ranged from 19.3 in Falkirk to

4.9 in Motherwell and Wishaw.

In Glasgow the rate was 13.4 and in Edinburgh 12.7.

There were no deaths from the principal epidemic diseases.

There were 130 deaths attributed to coronary thrombosis and 112 to malignant neoplasms, 38 of which were of the respiratory system.

Deaths from respiratory diseases (other than tubercular, influenzal and malignant) numbered 64, and equalled an annual death-rate from these causes of 1.3 per thousand. This death-rate is 0.1 less than in the previous week, but 0.2 above the average.

Deaths of children aged less than one year numbered 29, being the same as in the previous week. Of these, 18 were aged 0-6 days and 4 were aged 7-27 days. Deaths of persons aged sixty-five years and over numbered 392, and are 4 fewer than in the previous week.

Deaths due to violence numbered 33, and are 1 fewer than in the previous week.

The number of new claims to sickness benefit under the National Insurance Acts made at Local Offices of the Ministry of Pensions & National Insurance in Scotland during the week ended 14th April 1964, was 20,535. The number of such claims made at the Seventeen Principal Towns is shown on the last page of this return.

The mean temperature for the towns from which returns were received was 47.8°, being 1.5° above that for the previous week, and 3.4° above the average for the corresponding week in the period 1901-1930.

The mean rainfall was 0.61 inch, and the mean sunshine 38.0 hours.

### OF HEBIRTHS, DEATHS AND MARRIAGES INFECTIOUS DISEASES NEW CLAIMS TO SICKNESS

WEATHER REPORT

Week ended 25th April 1964 Vital Statistics totals from first week of the year\_17 towns

	1			21 101110	,
	Live Births	Stillbirths	Marriages	Total Deaths	Deaths under 1 year
1964	17,748	350	7,569	10,729	494
1963	17,792	379	7,322	13,436	543
1962	18,105	377	7,498	12,078	540

In the Seventeen Principal Towns of Scotland, being those burghs which at the date of the 1961 Census had populations of over 30,000, there were registered during the week ended 25th April 1964, the births of 1,048 living children, and of 13 stillborn children, 194 marriages and 571 deaths. In the case of births, stillbirths and deaths the numbers are corrected to allow for usual residence. The equivalent annual birth-rate (living children only) is 21.2 per thousand of the population, the marriage-rate 3.9 and the death-rate 11.6. The number of stillbirths corresponds to a rate of 12 per thousand total births registered (including stillborn).

The birth-rate for the week is 0.2 more than in the previous week, but 1.2 below the five years' average. The marriage-rate is 2.2 less than in the previous week, and 0.4 below the average. The death-rate is 0.7 less than in the previous week, and 0.7 below the average.

The weekly death-rates in the individual towns ranged from 14.9 in Aberdeen to 1.5 in Airdrie.

In Glasgow the rate was 12.7 and in Edinburgh 10.0.

There were 4 deaths from the principal epidemic diseases—2 were due to influenza and 2 were due to meningococcal septicaemia.

There were 148 deaths attributed to coronary thrombosis and 120 to malignant neoplasms, 31 of which were of the respiratory system.

Deaths from respiratory diseases (other than tubercular, influenzal and malignant) numbered 41, and equalled an annual death-rate from these causes of 0.8 per thousand. This death-rate is 0.5 less than in the previous week, and 0.3 below the average.

Deaths of children aged less than one year numbered 27, being 2 fewer than in the previous week. Of these, 15 were aged 0-6 days and none was aged 7-27 days. Deaths of persons aged sixty-five years and over numbered 344, and are 48 fewer than in the previous week.

Deaths due to violence numbered 25, and are 8 fewer than in the previous week.

The number of new claims to sickness benefit under the National Insurance Acts made at Local Offices of the Ministry of Pensions & National Insurance in Scotland during the week ended 21st April 1964, was 19,418. The number of such claims made at the Seventeen Principal Towns is shown on the last page of this return.

The mean temperature for the towns from which returns were received was 46.6°, being 1.2° below that for the previous week, but 0.7° above the average for the corresponding

week in the period 1901-1930.

The mean rainfall was 1.35 inches, and the mean sunshine 9.8 hours.

1964	18,830	368	7,766	11,270	521
1963	18,838	398	7,536	14,052	574
1962	19,256	400	7,782	12,699	579

In the Seventeen Principal Towns of Scotland, being those burghs which at the date of the 1961 Census had populations of over 30,000, there were registered during the week ended 2nd May 1964, the births of 1,082 living children, and of 18 stillborn children, 197 marriages and 541 deaths. In the case of births, stillbirths and deaths the numbers are corrected to allow for usual residence. The equivalent annual birth-rate (living children only) is 21.9 per thousand of the population, the marriage-rate 4.0 and the death-rate 11.0. The number of stillbirths corresponds to a rate of 16 per thousand total births registered (including stillborn).

The birth-rate for the week is 0.7 more than in the previous week, and 0.4 above the five years' average. The marriage-rate is 0.1 more than in the previous week, but 0.7 below the average. The death-rate is 0.6 less than in the previous week, and 0.5 below the average.

The weekly death-rates in the individual towns ranged from 13.0 in Paisley to 5.2 in Dunfermline.

In Glasgow the rate was 11.5 and in Edinburgh 12.1.

There were no deaths from the principal epidemic diseases.

There were 118 deaths attributed to coronary thrombosis and 112 to malignant neoplasms, 37 of which were of the respiratory system.

Deaths from respiratory diseases (other than tubercular, influenzal and malignant) numbered 41, and equalled an annual death-rate from these causes of 0.8 per thousand. This death-rate is the same as in the previous week, but 0.2 below the average.

Deaths of children aged less than one year numbered 27, being the same as in the previous week. Of these, 16 were aged 0-6 days and 3 were aged 7-27 days. Deaths of persons aged sixty-five years and over numbered 324, and are 20 fewer than in the previous week.

Deaths due to violence numbered 35, and are 10 more than in the previous week.

The number of new claims to sickness benefit under the National Insurance Acts made at Local Offices of the Ministry of Pensions & National Insurance in Scotland during the week ended 28th April 1964, was 19,2:2. The number of such claims made at the Seventeen Principal Towns is shown on the last page of this return.

The mean temperature for the towns from which returns were received was 50.4°, being 3.8° above that for the previous week, and 4.1° above the average for the corresponding

week in the period 1901-1930.

The mean rainfall was 0.65 inch, and the mean sunshine 31.6 hours.

NOTE.—The averages used for comparison are, except where otherwise stated, the mean of the comparable rates in the Principal Towns in the corresponding week of the five preceding years.

WEEKLY RETURN OF THE REGISTRAR-GENERAL SCOTLAND

### INFECTIOUS DISEASES NEW CLAIMS TO SICKNESS BENEFIT WEATHER REPORT

### Week ended 9th May 1964

Vital Statistics totals from first week of the year-17 towns

	Live Births	Stillbirths	Marriages	Total Deaths	Deaths under 1 year
1964	19,838	395	7,930	11,857	554
1963	19,881	421	7,694	14,610	598
1962	20,377	425	7,955	13,272	607

In the Seventeen Principal Towns of Scotland, being those burghs which at the date of the 1961 Census had populations of over 30,000, there were registered during the week ended 9th May 1964, the births of 1,008 living children, and of 27 stillborn children, 164 marriages and 587 deaths. In the case of births, stillbirths and deaths the numbers are corrected to allow for usual residence. The equivalent annual birth-rate (living children only) is 20·4 per thousand of the population, the marriage-rate 3·3 and the death-rate 11·9. The number of stillbirths corresponds to a rate of 26 per thousand total births registered (including stillborn).

The birth-rate for the week is 1.5 less than in the previous week, and 0.9 below the five years' average. The marriage-rate is 0.7 less than in the previous week, and 0.1 below the average. The death-rate is 0.9 more than in the previous week, and 0.3 above the average.

The weekly death-rates in the individual towns ranged from 15.9 in Kirkcaldy to 4.3 in Kilmarnock.

In Glasgow the rate was 12.4 and in Edinburgh 13.5.

There were no deaths from the principal epidemic diseases.

There were 116 deaths attributed to coronary thrombosis and 132 to malignant neoplasms, 46 of which were of the respiratory system.

Deaths from respiratory diseases (other than tubercular, influenzal and malignant) numbered 50, and equalled an annual death-rate from these causes of 1.0 per thousand. This death-rate is 0.2 more than in the previous week, and 0.2 above the average.

Deaths of children aged less than one year numbered 33, being 6 more than in the previous week. Of these, 18 were aged 0-6 days and 2 were aged 7-27 days. Deaths of persons aged sixty-five years and over numbered 378, and are 54 more than in the previous week

Deaths due to violence numbered 29, and are 6 fewer than in the previous week.

The number of new claims to sickness benefit under the National Insurance Acts made at Local Offices of the Ministry of Pensions & National Insurance in Scotland during the week ended 5th May 1964, was 19,048. The number of such claims made at the Seventeen Principal Towns is shown on the last page of this return.

The mean temperature for the towns from which returns were received was  $51 \cdot 1^{\circ}$ , being  $0.7^{\circ}$  above that for the previous week, and  $3.5^{\circ}$  above the average for the corresponding week in the period 1901–1930.

The mean rainfall was 1.10 inches, and the mean sunshine 35.2 hours.

WEATHER REPORT

Vital Statistics totals from first week of the year-17 towns

	Live Births	Stillbirths	Marriages	Total Deaths	Deaths under 1 year
1964	20,925	413	8,114	12,385	577
1963	20,949	442	7,837	15,199	628
1962	21,373	445	8,109	13,794	629

In the Seventeen Principal Towns of Scotland, being those burghs which at the date of the 1961 Census had populations of over 30,000, there were registered during the week ended 16th May 1964, the births of 1,087 living children, and of 18 stillborn children, 184 marriages and 528 deaths. In the case of births, stillbirths and deaths the numbers are corrected to allow for usual residence. The equivalent annual birth-rate (living children only) is 22.0 per thousand of the population, the marriage-rate 3.7 and the death-rate 10.7. The number of stillbirths corresponds to a rate of 16 per thousand total births registered (including stillborn).

The birth-rate for the week is 1.6 more than in the previous week, and 1.0 above the five years' average. The marriage-rate is 0.4 more than in the previous week, and 0.8 above the average. The death-rate is 1.2 less than in the previous week, and 0.7 below the average.

The weekly death-rates in the individual towns ranged from 13.7 in Airdrie to 3.1 in Dunfermline.

In Glasgow the rate was 10.9 and in Edinburgh 12.6.

There were no deaths from the principal epidemic diseases.

There were 113 deaths attributed to coronary thrombosis and 95 to malignant neoplasms, 19 of which were of the respiratory system.

Deaths from respiratory diseases (other than tubercular, influenzal and malignant) numbered 47, and equalled an annual death-rate from these causes of 1.0 per thousand. This death-rate is the same as in the previous week, but 0.1 above the average.

Deaths of children aged less than one year numbered 23, being 10 fewer than in the previous week. Of these, 15 were aged 0-6 days and 3 were aged 7-27 days. Deaths of persons aged sixty-five years and over numbered 331, and are 47 fewer than in the previous week.

Deaths due to violence numbered 23, and are 6 fewer than in the previous week.

The number of new claims to sickness benefit under the National Insurance Acts made at Local Offices of the Ministry of Pensions & National Insurance in Scotland during the week ended 12th May 1964, was 18,210. The number of such claims made at the Seventeen Principal Towns is shown on the last page of this return.

The mean temperature for the towns from which returns were received was 51.4°, being 0.3° above that for the previous week, and 1.4° above the average for the corresponding week in the period 1901-1930.

The mean rainfall was 0.42 inch, and the mean sunshine 36.8 hours.

### INFECTIOUS DISEASES NEW CLAIMS TO SICKNESS BENEFIT WEATHER REPORT

Week ended 23rd May 1964

Vital Statistics totals from first week of the year-17 towns

	Live Births	Stillbirths	Marriages	Total Deaths	Deaths under 1 year
1964	21,910	426	8,305	12,939	599
1963	21,970	461	7,993	15,751	659
1962	22,463	477	8,287	14,347	655

In the Seventeen Principal Towns of Scotland, being those burghs which at the date of the 1961 Census had populations of over 30,000, there were registered during the week ended 23rd May 1964, the births of 985 living children, and of 13 stillborn children, 191 marriages and 554 deaths. In the case of births, stillbirths and deaths the numbers are corrected to allow for usual residence. The equivalent annual birth-rate (living children only) is 20·0 per thousand of the population, the marriage-rate 3·9 and the death-rate 11·2. The number of stillbirths corresponds to a rate of 13 per thousand total births registered (including stillborn).

The birth-rate for the week is 2.0 less than in the previous week, and 1.4 below the five years' average. The marriage-rate is 0.2 more than in the previous week, and 0.3 above the average. The death-rate is 0.5 more than in the previous week, and 0.2 above the average.

The weekly death-rates in the individual towns ranged from 14·7 in Greenock to 6·1 in Airdrie.

In Glasgow the rate was 10.6 and in Edinburgh 12.2.

There were no deaths from the principal epidemic diseases.

There were 127 deaths attributed to coronary thrombosis and 116 to malignant neoplasms, 21 of which were of the respiratory system.

Deaths from respiratory diseases (other than tubercular, influenzal and malignant) numbered 23, and equalled an annual death-rate from these causes of 0.5 per thousand. This death-rate is 0.5 less than in the previous week, and 0.3 below the average.

Deaths of children aged less than one year numbered 22, being ! fewer than in the previous week. Of these, 14 were aged 0-6 days and 1 was aged 7-27 days. Deaths of persons aged sixty-five years and over numbered 330, and are 1 fewer than in the previous week.

Deaths due to violence numbered 35, and are 12 more than in the previous week.

The number of new claims to sickness benefit under the National Insurance Acts made at Local Offices of the Ministry of Pensions & National Insurance in Scotland during the week ended 19th May 1964, was 17,269. The number of such claims made at the Seventeen Principal Towns is shown on the last page of this return.

The mean temperature for the towns from which returns were received was  $54.0^{\circ}$ , being  $2.6^{\circ}$  above that for the previous week, and  $2.2^{\circ}$  above the average for the corresponding

week in the period 1901-1930.

The mean rainfall was 0.73 inch, and the mean sunshine 24.1 hours.

of Births, Stillbirths and Deaths (including death-rates) have been provisionally corrected by transfer Estimated population at 31st December 1962. to place of usual residence if in Scotland

\*\* These figures represent the number of new claims made at Ministry of Pensions & National Insurance Offices in the towns named and include a number of claims made by insured persons resident in the landward area was the those offices.

### WEEKLY RETURN OF THE REGISTRAR-GENERAL SCOTLAND

### BIRTHS, DEATHS AND MARRIAGES INFECTIOUS DISEASES

### VEW CLAIMS TO SICKNESS BENEFIT THE HOTAL SOCIEWEATHER REPORT

for the Promotion

OF HEALTH Week ended 30th May 1964.

LIBRA RUStatistics totals from first week of the year—17 towns

	Live Births	Stillbirths	Marriages	Total Deaths	Deaths under 1 year
1964	23,001	448	8,506	13,491	618
1963	22,950	490	8,185	16,336	691
1962	23,528	496	8,539	14,925	684

In the Seventeen Principal Towns of Scotland, being those burghs which at the date of the 1961 Census had populations of over 30,000, there were registered during the week ended 30th May 1964, the births of 1,091 living children, and of 22 stillborn children, 201 marriages and 552 deaths. In the case of births, stillbirths and deaths the numbers are corrected to allow for usual residence. The equivalent annual birth-rate (living children only) is 22·1 per thousand of the population, the marriage-rate 4·1 and the death-rate 11·2. The number of stillbirths corresponds to a rate of 20 per thousand total births registered (including stillborn).

The birth-rate for the week is 2.1 more than in the previous week, and 1.8 above the five years' average. The marriage-rate is 0.2 more than in the previous week, but 0.4 below the average. The death-rate is the same as in the previous week, but 0.4 below the

The weekly death-rates in the individual towns ranged from 16.5 in Falkirk to 3.0 in Airdrie. ·

In Glasgow the rate was 12.4 and in Edinburgh 12.1.

There were 125 deaths attributed to coronary thrombosis. There was one death from coronary thrombosis in Aberdeen City in which typhoid fever was stated to be a contributory cause.

There were 117 deaths from malignant neoplasms, 29 of which were of the respiratory system.

Deaths from respiratory diseases (other than tubercular, influenzal and malignant) numbered 41, and equalled an annual death-rate from these causes of 0.8 per thousand. This death-rate is 0.3 more than in the previous week, but the same as the average.

Deaths of children aged less than one year numbered 19, being 3 fewer than in the previous week. Of these, 12 were aged 0-6 days and 1 was aged 7-27 days. Deaths of persons aged sixty-five years and over numbered 328, and are 2 fewer than in the previous week.

Deaths due to violence numbered 25, and are 10 fewer than in the previous week.

The number of new claims to sickness benefit under the National Insurance Acts made at Local Offices of the Ministry of Pensions & National Insurance in Scotland during the meek ended 26th May 1964, was 16,792. The number of such claims made at the Seventeen Principal Towns is shown on the last page of this return.

The mean temperature for the towns from which returns were received was 55·1°, being 1·1° above that for the previous week, and 1·3° above the average for the corresponding week in the period 1901-1930.

The mean rainfall was 0.16 inch, and the mean sunshine 58.7 hours.

Number of Births, Stillbirths and Deaths (including death-rates) have been provisionally corrected by transfer to place of usual residence if in Scotland.
 Typhoid Fever (040), Searlet Fever (050,051), Diphtheria (055), Whonping Cough (056), Meningococcal

<sup>\*\*</sup> These figures represent the number of new claims made at Ministry of Pensions & National Insurance Offices in the towns named and include a number of claims made by insured persons resident in the andward area served by those offices.

### WEEKLY RETURN OF THE REGISTRAR-GENERAL SCOTLAND

### BIRTHS, DEATHS AND MARRIAGES INFECTIOUS DISEASES

### CLAIMS TO SICKNESS BENEFIT

THE ROYAL SOCIEW EATHER REPORT

for the Promotion

OF HEALTH Week ended 6th June 1964

LIBRUNG Statistics totals from first week of the year-17 towns

-		1		1	1
	Live Births	Stillbirths	Marriages	Total Deaths	Deaths under 1 year
1964	24,083	466	8,814	14,002	638
1963	24,044	514	8,631	16,895	719
1962	24,652	517	8,943	15,524	713

In the Seventeen Principal Towns of Scotland, being those burghs which at the date of the 1961 Census had populations of over 30,000, there were registered during the week ended 6th June 1964, the births of 1,082 living children, and of 18 stillborn children, 308 marriages and 511 deaths. In the case of births, stillbirths and deaths the numbers are corrected to allow for usual residence. The equivalent annual birth-rate (living children only) is 21.9 per thousand of the population, the marriage-rate 6.2 and the death-rate 10.4. The number of stillbirths corresponds to a rate of 16 per thousand total births registered (including stillborn).

The birth-rate for the week is 0.2 less than in the previous week, but 0.9 above the five years' average. The marriage-rate is 2.1 more than in the previous week, but 2.4 below the average. The death-rate is 0.8 less than the previous week, and 0.3 below the average.

The weekly death-rates in the individual towns ranged from 16.8 in Greenock to 5.1 in Perth.

In Glasgow the rate was 10.5 and in Edinburgh 10.3.

There was 1 death from the principal epidemic diseases due to diphtheria.

There were 114 deaths attributed to coronary thrombosis 111 to malignant neoplasms, 27 of which were of the respiratory system.

Deaths from respiratory diseases (other than tubercular, influenzal and malignant) numbered 30, and equalled an annual death-rate from these causes of 0.6 per thousand. This death-rate is 0.2 less than in the previous week, and 0.1 below the average.

Deaths of children aged less than one year numbered 20, being 1 more than in the previous week. Of these, 11 were aged 0-6 days and 2 were aged 7-27 days. Deaths of persons aged sixty-five years and over numbered 302, and are 26 fewer than in the previous week.

Deaths due to violence numbered 24, and are 1 fewer than in the previous week.

The number of new claims to sickness benefit under the National Insurance Acts made at Local Offices of the Ministry of Pensions & National Insurance in Scotland during the week ended 2nd June 1964, was 17,608. The number of such claims made at the Seventeen Principal Towns is shown on the last page of this return.

The mean temperature for the towns from which returns were received was 50.3°, being 4.8° below that for the previous week, and 4.0° below the average for the corresponding week in the period 1901-1930.

The mean rainfall was 1.08 inches, and the mean sunshine 32.2 hours.

16,087

In the Seventeen Principal Towns of Scotland, being those burghs which at the date of the 1961 Census had populations of over 30,000, there were registered during the week ended 13th June 1964, the births of 1,047 living children, and of 24 stillborn children, 436 marriages and 545 deaths. In the case of births, stillbirths and deaths the numbers are corrected to allow for usual residence. The equivalent annual birth-rate (living children only) is 21.2 per thousand of the population, the marriage-rate 8.8 and the death-rate 11.0. The number of stillbirths corresponds to a rate of 22 per thousand total births registered (including stillborn).

534

The birth-rate for the week is 0.7 less than in the previous week, but the same as the five years' average. The marriage-rate is 2.6 more than in the previous week, and 0.7 above the average. The death-rate is 0.6 more than the previous week, and 0.3 above the

1964 1963 1962

The weekly death-rates in the individual towns ranged from 18.5 in Ayr to 5.1 in Perth.

In Glasgow the rate was 10.8 and in Edinburgh 11.3.

25,687

There were no deaths from the principal epidemic diseases.

There were 129 deaths attributed to coronary thrombosis 113 to malignant neoplasms. 29 of which were of the respiratory system.

Deaths from respiratory diseases (other than tubercular, influenzal and malignant) numbered 35, and equalled an annual death-rate from these causes of 0.7 per thousand. This death-rate is 0.1 more than in the previous week, and 0.1 above the average.

Deaths of children aged less than one year numbered 20, being the same as in the previous week. Of these, 13 were aged 0-6 days and 2 were aged 7-27 days. Deaths of persons aged sixty-five years and over numbered 345, and are 43 more than in the previous

Deaths due to violence numbered 33, and are 9 more than in the previous week.

The number of new claims to sickness benefit under the National Insurance Acts made at Local Offices of the Ministry of Pensions & National Insurance in Scotland during the week ended June 9th 1964, was 18,614. The number of such claims made at the Seventeen Principal Towns is shown on the last page of this return.

The mean temperature for the towns from which returns were received was 57.2°, being 6.9° above that for the previous week, and 2.6° above the average for the corresponding

week in the period 1901-1930.

The mean rainfall was 1.01 inches, and the mean sunshine 30.4 hours.

### WEEKLY RETURN OF THE REGISTRAR-GENERAL SCOTLAND

### BIRTHS, DEATHS AND MARRIAGES INFECTIOUS DISEASES

### NEW CLAIMS TO SICKNESS BENEFIT WEATHER REPORT THE ROYAL

Week ended 20th June 1964

THE ROYAL SOCIETY for the Promotion OF HEALTH

Vital Statistics totals from first week of the year—17 towns LIBRARY

	Live Births	Stillbirths	Marriages	Total Deaths	Deaths under 1 year
1964	26,153	510	9,597	15,119	678
1963	26,206	547	9,413	17,937	772
1962	26,765	554	9,672	16,608	770

In the Seventeen Principal Towns of Scotland, being those burghs which at the date of the 1961 Census had populations of over 30,000, there were registered during the week ended 20th June 1964, the births of 1,023 living children, and of 20 stillborn children, 347 marriages and 572 deaths. In the case of births, stillbirths and deaths the numbers are corrected to allow for usual residence. The equivalent annual birth-rate (living children only) is 20.7 per thousand of the population, the marriage-rate 7.0 and the death-rate 11.6. The number of stillbirths corresponds to a rate of 19 per thousand total births registered (including stillborn).

The birth-rate for the week is 0.5 less than in the previous week, and 0.2 below the five years' average. The marriage-rate is 1.8 less than in the previous week, and 0.8 below the average. The death-rate is 0.6 more than the previous week, and 1.1 above the average.

mi.

The weekly death-rates in the individual towns ranged from 16.9 in Motherwell & Wishaw to 5.7 in Coatbridge.

In Glasgow the rate was 12.0 and in Edinburgh 9.3.

There were no deaths from the principal epidemic diseases.

There were 125 deaths attributed to coronary thrombosis 126 to malignant neoplasms, 39 of which were of the respiratory system.

Deaths from respiratory diseases (other than tubercular, influenzal and malignant) numbered 44, and equalled an annual death-rate from these causes of 0.9 per thousand. This death-rate is 0.2 more than in the previous week, and 0.2 above the average.

Deaths of children aged less than one year numbered 20, being the same as in the previous week. Of these, 15 were aged 0-6 days and none was aged 7-27 days. Deaths of persons aged sixty-five years and over numbered 353, and are 8 more than in the previous

Deaths due to violence numbered 21, and are 12 fewer than in the previous week.

The number of new claims to sickness benefit under the National Insurance Acts made at Local Offices of the Ministry of Pensions & National Insurance in Scotland during the week ended 16th June 1964, was 18,204. The number of such claims made at the Seventeen Principal Towns is shown on the last page of this return.

The mean temperature for the towns from which returns were received was  $52 \cdot 3^{\circ}$ , being  $4.9^{\circ}$  below that for the previous week, and  $3.1^{\circ}$  below the average for the corresponding

week in the period 1901-1930.

The mean rainfall was 0.44 inches, and the mean sunshine 43.8 hours.

NOTE.—The averages used for comparison are, except where otherwise stated, the mean of the comparable rates in the Principal Towns in the corresponding week of the five preceding years.

OF HEALTH LIBRARY

Vital Statistics totals from first week of the year—17 towns

					Research to the second of the
	Live Births	Stillbirths	Marriages	Total Deaths	Deaths under 1 year
1964	27,192	523	10,043	15,657	700
1963	27,244	564	9,869	18,434	789
1962	27,862	571	10,115	17,123	<b>7</b> 97

In the Seventeen Principal Towns of Scotland, being those burghs which at the date of the 1961 Census had populations of over 30,000, there were registered during the week ended 27th June 1964, the births of 1,039 living children, and of 13 stillborn children, 446 marriages and 538 deaths. In the case of births, stillbirths and deaths the numbers are corrected to allow for usual residence. The equivalent annual birth-rate (living children only) is 21.0 per thousand of the population, the marriage-rate 9.0 and the death-rate 10.9. The number of stillbirths corresponds to a rate of 12 per thousand total births registered (including stillborn).

The birth-rate for the week is 0.3 more than in the previous week, and 0.1 above the five years' average. The marriage-rate is 2.0 more than in the previous week, but 0.2 below the average. The death-rate is 0.7 less than the previous week, but 0.9 above the average.

The weekly death-rates in the individual towns ranged from 21.5 in Perth to 6.0

in Hamilton.

In Glasgow the rate was 10.7 and in Edinburgh 10.4.

There was 1 death from the principal epidemic diseases due to typhoid fever.

There were 115 deaths attributed to coronary thrombosis 98 to malignant neoplasms, 31 of which were of the respiratory system.

Deaths from respiratory diseases (other than tubercular, influenzal and malignant) numbered 38, and equalled an annual death-rate from these causes of 0.8 per thousand. This death-rate is 0.1 less than in the previous week, but 0.3 above the average.

Deaths of children aged less than one year numbered 22, being 2 more than in the previous week. Of these, 13 were aged 0–6 days and 2 were aged 7–27 days. Deaths of persons aged sixty-five years and over numbered 329, and are 24 fewer than in the previous week.

Deaths due to violence numbered 28, and are 7 more than in the previous week.

The number of new claims to sickness benefit under the National Insurance Acts made at Local Offices of the Ministry of Pensions & National Insurance in Scotland during the week ended 23rd June 1964, was 16,815. The number of such claims made at the Seventeen Principal Towns is shown on the last page of this return.

The mean temperature for the towns from which returns were received was  $57.8^{\circ}$ , being  $5.5^{\circ}$  above that for the previous week, and  $1.7^{\circ}$  above the average for the corresponding

week in the period 1901-1930.

The mean rainfall was 0.12 inch, and the mean sunshine 51.2 hours.

WEEKLY RETURN OF THE REGISTRAR-GENER THE ROYAL SOCIETY

for the Promotion

BIRTHS, DEATHS AND MARRIAGESOF HEALTH INFECTIOUS DISEASES LIBRARY

### NEW CLAIMS TO SICKNESS BENEFIT WEATHER REPORT

Week ended 4th July 1964

Vital Statistics totals from first week of the year-17 towns

	Live Births	Stillbirths	Marriages	Total Deaths	Deaths under 1 year
1964	28,226	547	10,559	16,203	728
1963	28,286	587	10,474	19,028	821
1962	28,934	596	10,711	17,686	824

In the Seventeen Principal Towns of Scotland, being those burghs which at the date of the 1961 Census had populations of over 30,000, there were registered during the week ended 4th July 1964, the births of 1,034 living children, and of 24 stillborn children, 516 marriages and 546 deaths. In the case of births, stillbirths and deaths the numbers are corrected to allow for usual residence. The equivalent annual birth-rate (living children only) is 20.9 per thousand of the population, the marriage-rate 10.5 and the death-rate 11.1. The number of stillbirths corresponds to a rate of 23 per thousand total births registered (including stillborn).

The birth-rate for the week is 0.1 less than in the previous week, but 0.3 above the five years' average. The marriage-rate is 1.5 more than in the previous week, but 1.0 below the average. The death-rate is 0.2 more than the previous week, and 0.3 above the average.

The weekly death-rates in the individual towns ranged from 13·4 in Motherwell and Wishaw to 4·6 in Ayr.

In Glasgow the rate was 11.4 and in Edinburgh 12.2.

There were no deaths from the principal epidemic diseases.

There were 137 deaths attributed to coronary thrombosis and 101 to malignant neoplasms, 37 of which were of the respiratory system.

Deaths from respiratory diseases (other than tubercular, influenzal and malignant) numbered 40, and equalled an annual death-rate from these causes of 0.8 per thousand. This death-rate is the same as in the previous week, but 0.2 above the average.

Deaths of children aged less than one year numbered 28, being 6 more than in the previous week. Of these, 19 were aged 0-6 days and 1 was aged 7-27 days. Deaths of persons aged sixty-five years and over numbered 315, and are 14 fewer than in the previous week.

Deaths due to violence numbered 25, and are 3 fewer than in the previous week.

The number of new claims to sickness benefit under the National Insurance Acts made at Local Offices of the Ministry of Pensions & National Insurance in Scotland during the week ended 30th June 1964, was 16,003. The number of such claims made at the Seventeen Principal Towns is shown on the last page of this return.

The mean temperature for the towns from which returns were received was  $56\cdot1^{\circ}$ , being  $1\cdot7^{\circ}$  below that for the previous week, and  $1\cdot5^{\circ}$  below the average for the corresponding to the previous 1001, 1000.

week in the period 1901-1930.

The mean rainfall was 0.08 inch, and the mean sunshine 56.1 hours.

### BIRTHS, DEATHS AND MARRIAGES INFECTIOUS DISEASES NEW CLAIMS TO SICKNESS BENEFIT WEATHER REPORT

Week ended 11th July 1964

THE ROYAL SOCIETY for the Promotion

Vital Statistics totals from first week of the year-17 towns

OF HEALTH LIBRARY

	Live Births	G. THE CO.			MINITAL
	Live Births	Stillbirths	Marriages	Total Deaths	Deaths under 1 year
1964	29,232	568	11,057	16,719	752
1963	29,206	606	10,997	19,554	837
1962	29,919	614	11,267	18,160	856

In the Seventeen Principal Towns of Scotland, being those burghs which at the date of the 1961 Census had populations of over 30,000, there were registered during the week ended 11th July 1964, the births of 1,006 living children, and of 21 stillborn children, 498 narriages and 516 deaths. In the case of births, stillbirths and deaths the numbers are corrected to allow for usual residence. The equivalent annual birth-rate (living children only) s 20·4 per thousand of the population, the marriage-rate 10·1 and the death-rate 10·5. The number of stillbirths corresponds to a rate of 20 per thousand total births registered including stillborn).

The birth-rate for the week is 0.5 less than in the previous week, but 0.7 above the ive years' average. The marriage-rate is 0.4 less than in the previous week, and 1.0 below he average. The death-rate is 0.6 less than the previous week, but 0.6 above the overage.

The weekly death-rates in the individual towns ranged from 16.5 in Perth to 6.0 in Jamilton.

In Glasgow the rate was 9.6 and in Edinburgh 11.5.

There were no deaths from the principal epidemic diseases.

There were 111 deaths attributed to coronary thrombosis and 108 to malignant neoplasms, 1 of which were of the respiratory system.

Deaths from respiratory diseases (other than tubercular, influenzal and malignant) umbered 42, and equalled an annual death-rate from these causes of 0.9 per thousand. This death-rate is 0.1 more than in the previous week, and 0.4 above the average.

Deaths of children aged less than one year numbered 24, being 4 fewer than in the revious week. Of these, 21 were aged 0-6 days and 1 was aged 7-27 days. Deaths of ersons aged sixty-five years and over numbered 307, and are 8 fewer than in the previous year.

Deaths due to violence numbered 24, and are 1 fewer than in the previous week.

The number of new claims to sickness benefit under the National Insurance Acts made t Local Offices of the Ministry of Pensions & National Insurance in Scotland during the eek ended 7th July 1964, was 16,121. The number of such claims made at the eventeen Principal Towns is shown on the last page of this return.

The mean temperature for the towns from which returns were received was 55·1°, being 0° below that for the previous week, and 3·5° below the average for the corresponding

reek in the period 1901-1930.

The mean rainfall was 0.93 inches, and the mean sunshine 39.1 hours.

OTE.—The averages used for comparison are, except where otherwise stated, the mean of the comparable rates in the Principal Towns in the corresponding week of the five preceding years.

### WEEKLY RETURN OF THE REGISTRAR-GENERAL **SCOTLAND**

### BIRTHS, DEATHS AND MARRIAGES INFECTIOUS DISEASES

### NEW CLAIMS TO SICKNESS BENEFIT WEATHER REPORT

Week ended 18th July 1964

THE ROYAL SOCIETY for the Promotion OF HEALTH

Vital Statistics totals from first week of the year-17 Jowns LIBRARY

	Live Births	Stillbirths	Marriages	Total Deaths	Deaths under 1 year
1964	30,283	<b>5</b> 95	11,524	17,228	. 775
1963	30,305	631	11,531	20,094	862
1962	31,031	643	11,890	18,700	887

In the Seventeen Principal Towns of Scotland, being those burghs which at the date of the 1961 Census had populations of over 30,000, there were registered during the week ended 18th July 1964, the births of 1,051 living children, and of 27 stillborn children, 467 marriages and 509 deaths. In the case of births, stillbirths and deaths the numbers are corrected to allow for usual residence. The equivalent annual birth-rate (living children only) is 21.3 per thousand of the population, the marriage-rate 9.5 and the death-rate 10.3. The number of stillbirths corresponds to a rate of 25 per thousand total births registered (including stillborn).

The birth-rate for the week is 0.9 more than in the previous week, and 0.4 above the five years' average. The marriage-rate is 0.6 less than in the previous week, and 2.8 below the average. The death-rate is 0.2 less than the previous week, and 0.2 below the

The weekly death-rates in the individual towns ranged from 13.6 in Dundee to 5.2 in Dunfermline.

In Glasgow the rate was 10·1 and in Edinburgh 11·1.

There was 1 death from the principal epidemic diseases due to scarlet fever.

There were 120 deaths attributed to coronary thrombosis and 133 to malignant neoplasms, 32 of which were of the respiratory system.

Deaths from respiratory diseases (other than tubercular, influenzal and malignant) numbered 38, and equalled an annual death-rate from these causes of 0.8 per thousand. This death-rate is 0.1 less than in the previous week, but 0.1 above the average.

Deaths of children aged less than one year numbered 23, being 1 fewer than in the previous week. Of these, 16 were aged 0-6 days and none was aged 7-27 days. Deaths of persons aged sixty-five years and over numbered 305, and are 2 fewer than in the previous

Deaths due to violence numbered 24, and are the same as in the previous week.

The number of new claims to sickness benefit under the National Insurance Acts made at Local Offices of the Ministry of Pensions & National Insurance in Scotland during the week ended 14th July 1964, was 14,570. The number of such claims made at the Seventeen Principal Towns is shown on the last page of this return.

The mean temperature for the towns from which returns were received was 59.7°, being 4.6° above that for the previous week, and 0.6° above the average for the corresponding

week in the period 1901-1930.

The mean rainfall was 0.43 inch, and the mean sunshine 37.1 hours.

NOTE.—The averages used for comparison are, except where otherwise stated, the mean of the comparable rates in the Principal Towns in the corresponding week of the five preceding years.

### WEEKLY RETURN OF THE REGISTRAR-GENERAL SCOTLAND

### BIRTHS, DEATHS AND MARRIAGES INFECTIOUS DISEASES

### NEW CLAIMS TO SICKNESS BE WEATHER REPORT

670

Week ended 25th July 1964

THE ROYAL SOCIETY

for the Promotion

OF HEALTH

912

Vital Statistics totals from first week of the year-17 tow Live Births Stillbirths Marriages Total Deaths Deaths under 1 year 31,243 607 12,088 17,745 788 31,318 653 11,926 20,624 880

12,265

19,189

In the Seventeen Principal Towns of Scotland, being those burghs which at the date of the 1961 Census had populations of over 30,000, there were registered during the week ended 25th July 1964, the births of 960 living children, and of 12 stillborn children, 564 marriages and 517 deaths. In the case of births, stillbirths and deaths the numbers are corrected to allow for usual residence. The equivalent annual birth-rate (living children only) is 19·4 per thousand of the population, the marriage-rate 11·4 and the death-rate 10·5. The number of stillbirths corresponds to a rate of 12 per thousand total births registered (including stillborn).

The birth-rate for the week is 1.9 less than in the previous week, and 1.3 below the five years' average. The marriage-rate is 1.9 more than in the previous week, and 2.0 above the average. The death-rate is 0.2 more than in the previous week, and 0.3 above the average.

The weekly death-rates in the individual towns ranged from 15.5 in Motherwell and Wishaw to 4.7 in Coatbridge.

In Glasgow the rate was 10.9 and in Edinburgh 11.1.

32,121

1964

1963

1962

There were no deaths from the principal epidemic diseases.

There were 119 deaths attributed to coronary thrombosis and 112 to malignant neoplasms, 35 of which were of the respiratory system.

Deaths from respiratory diseases (other than tubercular, influenzal and malignant) numbered 35, and equalled an annual death-rate from these causes of 0.7 per thousand. This death-rate is 0.1 less than in the previous week, but 0.1 above the average.

Deaths of children aged less than one year numbered 13, being 10 fewer than in the previous week. Of these, 7 were aged 0-6 days and none was aged 7-27 days. Deaths of persons aged sixty-five years and over numbered 323, and are 18 more than in the previous

Deaths due to violence numbered 24, and are the same as in the previous week.

The number of new claims to sickness benefit under the National Insurance Acts made at Local Offices of the Ministry of Pensions & National Insurance in Scotland during the week ended 21st July 1964, was 16,008. The number of such claims made at the Seventeen Principal Towns is shown on the last page of this return.

The mean temperature for the towns from which returns were received was  $60 \cdot 2^{\circ}$ , being  $0.5^{\circ}$  above that for the previous week, and  $2.3^{\circ}$  above the average for the corresponding week in the period 1901–1930.

The mean rainfall was 0.33 inch, and the mean sunshine 27.3 hours.

NOTE.—The averages used for comparison are, except where otherwise stated, the mean of the comparable rates in the Principal Towns in the corresponding week of the five preceding years.

### BIRTHS, DEATHS AND MARRIAGES INFECTIOUS DISEASES NEW CLAIMS TO SICKNESS BENEFIT WEATHER REPORT

Week ended 1st August 1964

Vital Statistics totals from first wools of the

THE ROYAL SOCIETY for the Promotion

	ritat Statistic	s wills from f	ist week of the	year I town	THEALTH
	Live Births	Stillbirths	Marriages	Tota Deaths	BRARY Deaths under 1 year
1964	32,327	630	12,493	18,211	814
1963	32,312	680	12,287	21,181	894
1962	33,103	693	12,642	19,742	940

n the Seventeen Principal Towns of Scotland, being those burghs which at the date of the 961 Census had populations of over 30,000, there were registered during the week ended st August 1964, the births of 1,084 living children, and of 23 stillborn children, 405 parriages and 466 deaths. In the case of births, stillbirths and deaths the numbers are orrected to allow for usual residence. The equivalent annual birth-rate (living children only) 22.0 per thousand of the population, the marriage-rate 8.2 and the death-rate 9.4. The umber of stillbirths corresponds to a rate of 21 per thousand total births registered ncluding stillborn).

The birth-rate for the week is 2.6 more than in the previous week, and 1.4 above the ve years' average. The marriage-rate is 3.2 less than in the previous week, and 0.3 below ne average. The death-rate is 1.1 less than in the previous week, and 1.3 below the

The weekly death-rates in the individual towns ranged from 14.7 in Greenock to ·6 in Airdrie.

In Glasgow the rate was 9.3 and in Edinburgh 10.3.

There was 1 death from the principal epidemic diseases—due to measles.

There were 110 deaths attributed to coronary thrombosis and 95 to malignant neoplasms. 0 of which were of the respiratory system.

Deaths from respiratory diseases (other than tubercular, influenzal and malignant) umbered 22, and equalled an annual death-rate from these causes of 0.4 per thousand. his death-rate is 0.3 less than in the previous week, and 0.3 below the average.

Deaths of children aged less than one year numbered 26, being 13 more than in the revious week. Of these, 15 were aged 0-6 days and 3 were aged 7-27 days. Deaths of ersons aged sixty-five years and over numbered 295, and are 28 fewer than in the previous

Deaths due to violence numbered 15, and are 9 fewer than in the previous week.

The number of new claims to sickness benefit under the National Insurance Acts made Local Offices of the Ministry of Pensions & National Insurance in Scotland during the eek ended 28st July 1964, was 13,989. The number of such claims made at the eventeen Principal Towns is shown on the last page of this return.

The mean temperature for the towns from which returns were received was 57.9°, being ·3° below that for the previous week, and 0·1° below the average for the corresponding

eek in the period 1901-1930.

The mean rainfall was 0.14 inch, and the mean sunshine 36.8 hours.

OTE.—The averages used for comparison are, except where otherwise stated, the mean of the comparable rates in the Principal Towns in the corresponding week of the five preceding years.

### WEEKLY RETURN OF THE REGISTRAR-GENERAL SCOTLAND

### BIRTHS, DEATHS AND MARRIAGES INFECTIOUS DISEASES NEW CLAIMS TO SICKNESS BENEFIT

WEATHER REPORT

Week ended 8th August 1964

THE ROYAL SOCIETY for the Promotion OF HEALTH

Vital Statistics totals from first week of the year-17 owns LIBRARY

Live Births Stillbirths Marriages Total Deaths Deaths under 1 year 33,327 658 12,951 18,677 838

1963 33,271 696 12,789 21,699 914 1962 34,089 718 13,092 20,239 965

In the Seventeen Principal Towns of Scotland, being those burghs which at the date of the 1961 Census had populations of over 30,000, there were registered during the week ended 8th August 1964, the births of 1,000 living children, and of 28 stillborn children, 458 marriages and 466 deaths. In the case of births, stillbirths and deaths the numbers are corrected to allow for usual residence. The equivalent annual birth-rate (living children only) is 20.3 per thousand of the population, the marriage-rate 9.3 and the death-rate 9.4. The number of stillbirths corresponds to a rate of 27 per thousand total births registered (including stillborn).

The birth-rate for the week is 1.7 less than in the previous week, but 0.3 above the five years' average. The marriage-rate is 1.1 more than in the previous week, but 0.2 below the average. The death-rate is the same as in the previous week, but 0.5 below the

The weekly death-rates in the individual towns ranged from 11.5 in Ayr to 6.5 in Kilmarnock.

In Glasgow the rate was 8.9 and in Edinburgh 11.3.

There were no deaths from the principal epidemic diseases.

There were 118 deaths attributed to coronary thrombosis and 106 to malignant neoplasms, 30 of which were of the respiratory system.

Deaths from respiratory diseases (other than tubercular, influenzal and malignant) numbered 34, and equalled an annual death-rate from these causes of 0.7 per thousand. This death-rate is 0.3 more than in the previous week, but the same as the average.

Deaths of children aged less than one year numbered 24, being 2 fewer than in the previous week. Of these, 17 were aged 0-6 days and none was aged 7-27 days. Deaths of persons aged sixty-five years and over numbered 285, and are 10 fewer than in the previous

Deaths due to violence numbered 25, and are 10 more than in the previous week.

The number of new claims to sickness benefit under the National Insurance Acts made at Local Offices of the Ministry of Pensions & National Insurance in Scotland during the week ended 4th August 1964, was 13,343. The number of such claims made at the Seventeen Principal Towns is shown on the last page of this return.

The mean temperature for the towns from which returns were received was 59.6°, being  $1.7^{\circ}$  above that for the previous week, and  $1.2^{\circ}$  above the average for the corresponding week in the period 1901-1930.

1964

The mean rainfall was 0.55 inch, and the mean sunshine 27.3 hours.

NOTE.—The averages used for comparison are, except where otherwise stated, the mean of the comparable rates in the Principal Towns in the corresponding week of the five preceding years.

### BIRTHS, DEATHS AND MARRIAGES INFECTIOUS DISEASES

### NEW CLAIMS TO SICKNESS BENEFIT WEATHER REPORT THE ROYA

Week ended 15th August 1964

Vital Statistics totals from first week of the year-

THE ROYAL SOCIETY
for the Promotion
OF HEALTH

			is week of the	year 17 town	LILDIN
	Live Births	Stillbirths	Marriages	Total Deaths	Deaths under 1 year
1964	34,358	678	13,335	19,155	859
1963	34,341	712	13,158	22,194	944
1962	35,109	740	13,444	20,793	999

In the Seventeen Principal Towns of Scotland, being those burghs which at the date of the 1961 Census had populations of over 30,000, there were registered during the week ended 15th August 1964, the births of 1,031 living children, and of 20 stillborn children, 384 marriages and 478 deaths. In the case of births, stillbirths and deaths the numbers are corrected to allow for usual residence. The equivalent annual birth-rate (living children only) is 20.9 per thousand of the population, the marriage-rate 7.8 and the death-rate 9.7. The number of stillbirths corresponds to a rate of 19 per thousand total births registered (including stillborn).

The birth-rate for the week is 0.6 more than in the previous week, and 0.9 above the five years' average. The marriage-rate is 1.5 less than in the previous week, but 0.4 above the average. The death-rate is 0.3 more than in the previous week, but 0.4 below the average.

The weekly death-rates in the individual towns ranged from 14.9 in Kirkcaldy to 3.2 in Kilmarnock.

In Glasgow the rate was 10.1 and in Edinburgh 10.0.

There were no deaths from the principal epidemic diseases.

There were 111 deaths attributed to coronary thrombosis and 118 to malignant neoplasms, 37 of which were of the respiratory system.

Deaths from respiratory diseases (other than tubercular, influenzal and malignant) numbered 34, and equalled an annual death-rate from these causes of 0.7 per thousand. This death-rate is the same as in the previous week, and 0.1 above the average.

Deaths of children aged less than one year numbered 21, being 3 fewer than in the previous week. Of these, 14 were aged 0-6 days and 1 was aged 7-27 days. Deaths of persons aged sixty-five years and over numbered 291, and are 6 more than in the previous week.

Deaths due to violence numbered 20, and are 5 fewer than in the previous week.

The number of new claims to sickness benefit under the National Insurance Acts made at Local Offices of the Ministry of Pensions & National Insurance in Scotland during the week ended 11th August 1964, was 15,935. The number of such claims made at the Seventeen Principal Towns is shown on the last page of this return.

The mean temperature for the towns from which returns were received was  $57.6^{\circ}$ , being  $2.0^{\circ}$  below that for the previous week, and the same as the average for the corresponding

week in the period 1901-1930.

The mean rainfall was 0.64 inch, and the mean sunshine 23.4 hours.

NOTF.—The averages used for comparison are, except where otherwise stated, the mean of the comparable rates in the Principal Towns in the corresponding week of the five preceding years.

### WEEKLY RETURN OF THE REGISTRAR-GENERAL SCOTLAND

### BIRTHS, DEATHS AND MARRIAGES INFECTIOUS DISEASES NEW CLAIMS TO SICKNESS BENEFIT

WEATHER REPORT

Week ended 22nd August 1964

1HE ROYAL SOCIETY
for the Promotion
OF HEALTH

	Vital Statisti	cs totals from f	first week of the	year—17 town	LIBRAR
	Live Births	Stillbirths	Marriages	Total Deaths	Deaths under 1 year
1964	35,329	691	13,717	19,675	889
1963	35,384	725	13,528	22,680	964
1962	36,084	763	13,873	21,300	1, 29

In the Seventeen Principal Towns of Scotland, being those burghs which at the date of the 1961 Census had populations of over 30,000, there were registered during the week ended 22nd August 1964, the births of 971 living children, and of 13 stillborn children, 382 marriages and 520 deaths. In the case of births, stillbirths and deaths the numbers are corrected to allow for usual residence. The equivalent annual birth-rate (living children only) is 19·7 per thousand of the population, the marriage-rate 7·7 and the death-rate 10·5. The number of stillbirths corresponds to a rate of 13 per thousand total births registered (including stillborn).

The birth-rate for the week is 1.2 less than in the previous week, and 0.1 below the five years' average. The marriage-rate is 0.1 less than in the previous week, and 0.4 below the average. The death-rate is 0.8 more than in the previous week, and 0.2 above the average.

The weekly death-rates in the individual towns ranged from 16.5 in Perth to 6.0 in Hamilton.

In Glasgow the rate was 9.6 and in Edinburgh 12.9.

There were no deaths from the principal epidemic diseases.

There were 134 deaths attributed to coronary thrombosis and 139 to malignant neoplasms, 43 of which were of the respiratory system.

Deaths from respiratory diseases (other than tubercular, influenzal and malignant) numbered 31, and equalled an annual death-rate from these causes of 0.6 per thousand. This death-rate is 0.1 less than in the previous week, and 0.1 below the average.

Deaths of children aged less than one year numbered 30, being 9 more than in the previous week. Of these, 28 were aged 0-6 days and none was aged 7-27 days. Deaths of persons aged sixty-five years and over numbered 295, and are 4 more than in the previous week.

Deaths due to violence numbered 20, and are the same as in the previous week.

The number of new claims to sickness benefit under the National Insurance Acts made it Local Offices of the Ministry of Pensions & National Insurance in Scotland during the veek ended 18th August 1964, was 15,361. The number of such claims made at the Seventeen Principal Towns is shown on the last page of this return.

The mean temperature for the towns from which returns were received was 53.8°, being 1.8° below that for the previous week, and 2.9° below the average for the corresponding

veek in the period 1901-1930.

The mean rainfall was 2.33 inches, and the mean sunshine 33.5 hours.

VOTE.—The averages used for comparison are, except where otherwise stated, the mean of the comparable rates in the Principal Towns in the corresponding week of the five preceding years.

in the towns named and include a number of claims made by insured persons resident in the landward area † Weekly means \*\* These figures represent the number of new claims made at Ministry of Pensions & National Insurance Offices † Weekly extremes. served by those offices.

### WEEKLY RETURN OF THE REGISTRAR-GENERAL SCOTLAND

### BIRTHS, DEATHS AND MARRIAGES INFECTIOUS DISEASES NEW CLAIMS TO SICKNESS BENEFIT

WEATHER REPORT

Week ended 29th August 1964

THE ROYAL SOCIETY for the Promotion OF HEALTH

Vital Statistics totals from first week of the year—17 towns

	1			7	TO ALL IN
	Live Births	Stillbirths	Marriages	Total Deaths	Deaths under 1 year
1964	36,314	715	14,098	20,224	907
1963	36,357	746	13,920	23,165	983
1962	37,127	783	14,289	21,809	1.062

In the Seventeen Principal Towns of Scotland, being those burghs which at the date of the 1961 Census had populations of over 30,000, there were registered during the week ended 29th August 1964, the births of 985 living children, and of 24 stillborn children, 381 marriages and 549 deaths. In the case of births, stillbirths and deaths the numbers are corrected to allow for usual residence. The equivalent annual birth-rate (living children only) is 20.0 per thousand of the population, the marriage-rate 7.7 and the death-rate 11.1. The number of stillbirths corresponds to a rate of 24 per thousand total births registered (including stillborn).

The birth-rate for the week is 0.3 more than in the previous week, and 0.1 above the five years' average. The marriage-rate is the same as in the previous week, but 0.9 below the average. The death-rate is 0.6 more than in the previous week, and 1.1 above the average.

The weekly death-rates in the individual towns ranged from 16.6 in Dunfermline to 6.5 in Paisley.

In Glasgow the rate was 11.0 and in Edinburgh 9.9.

There were no deaths from the principal epidemic diseases.

There were 134 deaths attributed to coronary thrombosis and 132 to malignant neoplasms, 43 of which were of the respiratory system.

Deaths from respiratory diseases (other than tubercular, influenzal and malignant) numbered 35, and equalled an annual death-rate from these causes of 0.7 per thousand. This death-rate is 0.1 more than in the previous week, but the same as the average.

Deaths of children aged less than one year numbered 18, being 12 fewer than in the previous week. Of these, 11 were aged 0-6 days and none was aged 7-27 days. Deaths of persons aged sixty-five years and over numbered 346, and are 51 more than in the previous week.

Deaths due to violence numbered 30, and are 10 more than in the previous week.

The number of new claims to sickness benefit under the National Insurance Acts made at Local Offices of the Ministry of Pensions & National Insurance in Scotland during the week ended 25th August 1964, was 16,248. The number of such claims made at the Seventeen Principal Towns is shown on the last page of this return.

The mean temperature for the towns from which returns were received was  $57 \cdot 2^{\circ}$ , being  $3 \cdot 4^{\circ}$  above that for the previous week, and  $1 \cdot 2^{\circ}$  above the average for the corresponding week in the period 1901–1930.

The mean rainfall was 1.40 inches, and the mean sunshine 24.7 hours.

NOTE.—The averages used for comparison are, except where otherwise stated, the mean of the comparable rates in the Principal Towns in the corresponding week of the five preceding years.

### WEEKLY RETURN OF THE REGISTRAR-GENERAL SCOTLAND

### BIRTHS, DEATHS AND MARRIAGES INFECTIOUS DISEASES NEW CLAIMS TO SICKNESS BENEFIT WEATHER REPORT

Week ended 5th September 1964

THE ROYAL SOCIETY for the Promotion OF HEALTH

	Vital Statistic	cs totals from f	irst week of the	year—17 towns	LIBRARY
-	Live Births	Stillbirths	Marriages	Total Deaths	Deaths under 1 year
1964	37,269	727	14,603	20,759	930
1963	37,317	766	14,434	23,653	1,000
1962	38,163	808	14,877	22,308	1,090

In the Seventeen Principal Towns of Scotland, being those burghs which at the date of the 1961 Census had populations of over 30,000, there were registered during the week ended 5th September 1964, the births of 955 living children, and of 12 stillborn children, 505 marriages and 535 deaths. In the case of births, stillbirths and deaths the numbers are corrected to allow for usual residence. The equivalent annual birth-rate (living children only) is 19.3 per thousand of the population, the marriage-rate 10.2 and the death-rate 10.8. The number of stillbirths corresponds to a rate of 12 per thousand total births registered (including stillborn).

The birth-rate for the week is 0.7 less than in the previous week, and 0.4 below the five years' average. The marriage-rate is 2.5 more than in the previous week, but 1.1 below the average. The death-rate is 0.3 less than in the previous week, but 1.0 above the average.

The weekly death-rates in the individual towns ranged from 14.6 in Dunfermline to 4.6 in Airdrie.

In Glasgow the rate was 11.4 and in Edinburgh 11.6.

There were no deaths from the principal epidemic diseases.

There were 125 deaths attributed to coronary thrombosis and 128 to malignant neoplasms, 34 of which were of the respiratory system.

Deaths from respiratory diseases (other than tubercular, influenzal and malignant) numbered 39, and equalled an annual death-rate from these causes of 0.8 per thousand. This death-rate is 0.1 more than in the previous week, and 0.2 above the average.

Deaths of children aged less than one year numbered 23, being 5 more than in the previous week. Of these, 11 were aged 0-6 days and 3 were aged 7-27 days. Deaths of persons aged sixty-five years and over numbered 322, and are 24 fewer than in the previous

Deaths due to violence numbered 24, and are 6 fewer than in the previous week.

The number of new claims to sickness benefit under the National Insurance Acts made at Local Offices of the Ministry of Pensions & National Insurance in Scotland during the week ended 1st September 1964, was 16,997. The number of such claims made at the Seventeen Principal Towns is shown on the last page of this return.

The mean temperature for the towns from which returns were received was 55.5°, being 1.7° below that for the previous week, and 0.2° below the average for the corresponding week in the period 1901-1930.

The mean rainfall was 0.52 inch, and the mean sunshine 53.0 hours.

NOTE.—The averages used for comparison are, except where otherwise stated, the mean of the comparable rates in the Principal Towns in the corresponding week of the five preceding years.

## WEEKLY RETURN OF THE REGISTRAR-GENERAL SCOTLAND

## BIRTHS, DEATHS AND MARRIAGES INFECTIOUS DISEASES NEW CLAIMS TO SICKNESS BENEFIT

## WEATHER REPORT

THE ROYAL SOCIETY for the Promotion

OF HEALTH

Week ended 12th September 1964

Vital Statistics totals from first week of the year-17 jowns LIBRARY

				Total Control of the	The state of the contract of the state of th
	Live Births	Stillbirths	Marriages	Total Deaths	Deaths under 1 year
1964	38,227	740	15,165	21,288	958
1963	38,309	792	15,019	24,178	1,028
1962	39,159	830	15,453	22,812	1,113

In the Seventeen Principal Towns of Scotland, being those burghs which at the date of the 1961 Census had populations of over 30,000, there were registered during the week ended 12th September 1964, the births of 958 living children, and of 13 stillborn children, 562 marriages and 529 deaths. In the case of births, stillbirths and deaths the numbers are corrected to allow for usual residence. The equivalent annual birth-rate (living children only) is 19·4 per thousand of the population, the marriage-rate 11·4 and the death-rate 10·7. The number of stillbirths corresponds to a rate of 13 per thousand total births registered (including stillborn).

The birth-rate for the week is 0.1 more than in the previous week, and 0.2 above the five years' average. The marriage-rate is 1.2 more than in the previous week, but the same as the average. The death-rate is 0.1 less than in the previous week, but 0.6 above the average.

The weekly death-rates in the individual towns ranged from 14·1 in Paisley to 6·0 in Hamilton.

In Glasgow the rate was 10.4 and in Edinburgh 11.7.

There was 1 death from the principal epidemic diseases due to meningococcal septicæmia. There were 133 deaths attributed to coronary thrombosis and 100 to malignant neoplasms, 28 of which were of the respiratory system.

Deaths from respiratory diseases (other than tubercular, influenzal and malignant) numbered 40, and equalled an annual death-rate from these causes of 0.8 per thousand. This death-rate is the same as in the previous week, but 0.3 above the average.

Deaths of children aged less than one year numbered 28, being 5 more than in the previous week. Of these, 16 were aged 0-6 days and 4 were aged 7-27 days. Deaths of persons aged sixty-five years and over numbered 321, and are 1 fewer than in the previous week

Deaths due to violence numbered 31, and are 7 more than in the previous week.

The number of new claims to sickness benefit under the National Insurance Acts made at Local Offices of the Ministry of Pensions & National Insurance in Scotland during the week ended 8th September 1964, was 17,521. The number of such claims made at the Seventeen Principal Towns is shown on the last page of this return.

The mean temperature for the towns from which returns were received was 56.2°, being 0.7° above that for the previous week, and 2.6° above the average for the corresponding

week in the period 1901-1930.

The mean rainfall was 1.32 inches, and the mean sunshine 24.1 hours.

NOTE.—The averages used for comparison are, except where otherwise stated, the mean of the comparable rates in the Principal Towns in the corresponding week of the five preceding years.

## WEEKLY RETURN OF THE REGISTRAR-GENERAL SCOTLAND

## BIRTHS, DEATHS AND MARRIAGES INFECTIOUS DISEASES NEW CLAIMS TO SICKNESS BENEFIT

### WEATHER REPORT

Week ended 19th September 1964

THE ROYAL SOCIETY
for the Promotion
OF HEALTH

Vital Statistics totals from first week of the year—17 towns LIBRARY

	Live Births	Stillbirths	Marriages	Total Deaths	Deaths under 1 year
1964	39,205	757	15,686	21,800	979
1963	39,298	811	15,602	24,730	1,054
1962	40,045	845	16,049	23,347	1,131

No the Seventeen Principal Towns of Scotland, being those burghs which at the date of the 961 Census had populations of over 30,000, there were registered during the week ended 9th September 1964, the births of 978 living children, and of 17 stillborn children, 521 marriages and 512 deaths. In the case of births, stillbirths and deaths the numbers are corrected to allow for usual residence. The equivalent annual birth-rate (living children only) is 19.8 per thousand of the population, the marriage-rate 10.6 and the death-rate 10.4. The number of stillbirths corresponds to a rate of 17 per thousand total births registered including stillborn).

The birth-rate for the week is 0.4 more than in the previous week, and 1.1 above the ive years' average. The marriage-rate is 0.8 less than in the previous week, and 1.3 below the average. The death-rate is 0.3 less than in the previous week, but 0.1 above the average.

The weekly death-rates in the individual towns ranged from 13.9 in Ayr to 3.8 in Coatbridge.

In Glasgow the rate was 10.3 and in Edinburgh 12.1.

There were no deaths from the principal epidemic diseases.

There were 111 deaths attributed to coronary thrombosis and 115 to malignant neoplasms, 30 of which were of the respiratory system.

Deaths from respiratory diseases (other than tubercular, influenzal and malignant) numbered 43, and equalled an annual death-rate from these causes of 0.9 per thousand. This death-rate is 0.1 more than in the previous week, and 0.2 above the average.

Deaths of children aged less than one year numbered 21, being 7 fewer than in the previous week. Of these, 10 were aged 0-6 days and 2 were aged 7-27 days. Deaths of persons aged sixty-five years and over numbered 323, and are 2 more than in the previous week.

Deaths due to violence numbered 35, and are 4 more than in the previous week.

The number of new claims to sickness benefit under the National Insurance Acts made at Local Offices of the Ministry of Pensions & National Insurance in Scotland during the week ended 15th September 1964, was 18,326. The number of such claims made at the Seventeen Principal Towns is shown on the last page of this return.

The mean temperature for the towns from which returns were received was 52·1°, being 1·1° below that for the previous week, but the same as the average for the corresponding

week in the period 1901–1930.

The mean rainfall was 1.20 inches, and the mean sunshine 27.2 hours.

NOTE.—The averages used for comparison are, except where otherwise stated, the mean of the comparable rates in the Principal Towns in the corresponding week of the five preceding years.

### WEEKLY RETURN OF THE REGISTRAR-GENERAL SCOTLAND

## BIRTHS, DEATHS AND MARRIAGES INFECTIOUS DISEASES

## NEW CLAIMS TO SICKNESS WEATHER REPORT

Week ended 26th September 1964

BENEEITONE for the Promotion OF HEALTH LIBRARY

Vital Statistics totals from first week of the year-17 towns

	Live Births	Stillbirths	Marriages	Total Deaths	Deaths under 1 year
1964	40,168	777	16,240	22,328	1010
1963	40,304	827	16,212	25,254	1081
1962	41,135	874	16,658	23,904	1156

In the Seventeen Principal Towns of Scotland, being those burghs which at the date of the 1961 Census had populations of over 30,000, there were registered during the week ended 26th September 1964, the births of 963 living children, and of 20 stillborn children, 554 marriages and 528 deaths. In the case of births, stillbirths and deaths the numbers are corrected to allow for usual residence. The equivalent annual birth-rate (living children only) is 19.5 per thousand of the population, the marriage-rate 11.2 and the death-rate 10.7. The number of stillbirths corresponds to a rate of 20 per thousand total births registered (including stillborn).

The birth-rate for the week is 0.3 less than in the previous week, and 0.9 below the five years' average. The marriage-rate is 0.6 more than in the previous week, but 1.2 below the average. The death-rate is 0.3 more than in the previous week, but 0.1 below the average.

The weekly death-rates in the individual towns ranged from 17.7 in Clydebank and Dunfermline to 4.7 in Coatbridge.

In Glasgow the rate was 10.4 and in Edinburgh 11.6.

There were no deaths from the principal epidemic diseases.

There were 109 deaths attributed to coronary thrombosis and 119 to malignant

neoplasms, 39 of which were of the respiratory system.

Deaths from respiratory diseases (other than tubercular, influenzal and malignant) numbered 39, and equalled an annual death-rate from these causes of 0.8 per thousand. This death-rate is 0.1 less than in the previous week, but 0.1 above the average.

Deaths of children aged less than one year numbered 31, being 10 more than in the previous week. Of these, 20 were aged 0-6 days and 3 were aged 7-27 days. Deaths of persons aged sixty-five years and over numbered 320, and are 3 fewer than in the previous week.

Deaths due to violence numbered 23, and are 12 fewer than in the previous week.

The number of new claims to sickness benefit under the National Insurance Acts made at Local Offices of the Ministry of Pensions & National Insurance in Scotland during the week ended 22nd September 1964, was 18,556. The number of such claims made at the Seventeen Principal Towns is shown on the last page of this return.

The mean temperature for the towns from which returns were received was 53.4°, being 1.3° above that for the previous week, and 0.9° above the average for the corresponding

week in the period 1901–1930.

The mean rainfall was 1.16 inches, and the mean sunshine 26.1 hours.

Note.—The averages used for comparison are, except where otherwise stated, the mean of the comparable rates in the Principal Towns in the corresponding week of the five preceding years.

These figures represent the number of new claims made at Ministry of Pensions & National Insurance Offices in the towns named and include a number of claims made by insured persons resident in the landward area Estimated population at 31st December 1962. corrected by Fever (040), Scarlet Fever (050,051), Diphtheria (055), Whooping Cough (056), Meni Number of Births, Stillbirths and Deaths (including death-rates) have been provisionally

### WEEKLY RETURN OF THE REGISTRAR-GENERAL SCOTLAND

## BIRTHS, DEATHS AND MARRIAGES INFECTIOUS DISEASES NEW CLAIMS TO SICKNESS BENEFIT

WEATHER REPORT

Week ended 3rd October 1964

THE ROYAL SOCIETY for the Promotion OF HEALTH

Vital Statistics totals from first week of the year-17 towns LIBRARY

				-	
	Live Births	Stillbirths	Marriages	Total Deaths	Deaths under 1 year
1964	41,238	795	16,872	22,878	. 1037
1963	41,288	844	16,894	25,759	1108
1962	42,281	898	17,345	24,416	1185

In the Seventeen Principal Towns of Scotland, being those burghs which at the date of the 1961 Census had populations of over 30,000, there were registered during the week ended 3rd October 1964, the births of 1070 living children, and of 18 stillborn children, 632 marriages and 550 deaths. In the case of births, stillbirths and deaths the numbers are corrected to allow for usual residence. The equivalent annual birth-rate (living children only) is 21.7 per thousand of the population, the marriage-rate 12.8 and the death-rate 11.1. The number of stillbirths corresponds to a rate of 17 per thousand total births registered (including stillborn).

The birth-rate for the week is 2.2 more than in the previous week, and 0.1 above the five years' average. The marriage-rate is 1.6 more than in the previous week, but 1.1 below the average. The death-rate is 0.4 more than in the previous week, and 0.9 above the average.

The weekly death-rates in the individual towns ranged from 15.2 in Falkirk to 6.9 in Kirkcaldy.

In Glasgow the rate was 11.3 and in Edinburgh 12.0.

There was 1 death from the principal epidemic diseases—due to influenza.

There were 123 deaths attributed to coronary thrombosis and 112 to malignant neoplasms, 30 of which were of the respiratory system.

Deaths from respiratory diseases (other than tubercular, influenzal and malignant) numbered 37, and equalled an annual death-rate from these causes of 0.7 per thousand. This death-rate is 0.1 less than in the previous week, and 0.1 below the average.

Deaths of children aged less than one year numbered 27, being 4 fewer than in the previous week. Of these, 19 were aged 0-6 days and 3 were aged 7-27 days. Deaths of persons aged sixty-five years and over numbered 332, and are 12 more than in the previous week.

Deaths due to violence numbered 33, and are 10 more than in the previous week.

The number of new claims to sickness benefit under the National Insurance Acts made at Local Offices of the Ministry of Pensions & National Insurance in Scotland during the week ended 29th September 1964, was 18,921. The number of such claims made at the Seventeen Principal Towns is shown on the last page of this return.

The mean temperature for the towns from which returns were received was 52.2°, being 1.2° below that for the previous week, but 0.9° above the average for the corresponding week in the period 1901–1930.

The mean rainfall was 0.09 inches, and the mean sunshine 36.0 hours.

Note.—The averages used for comparison are, except where otherwise stated, the mean of the comparable rates in the Principal Towns in the corresponding week of the five preceding years.

WEEKLY RETURN OF THE REGISTRAR-GENERAL SCOTLAND

[HE ROYAL SCOTETY]

## INFECTIOUS DISEASES LIBRARY NEW CLAIMS TO SICKNESS BENEFIT WEATHER REPORT

Week ended 10th October 1964

Vital Statistics totals from first week of the year-17 towns

	Live Births	Stillbirths	Marriages	Total Deaths	Deaths under 1 year
1964	42,329	810	17,669	23,394	1,055
1963	42,344	860	17,677	26,271	1,127
1962	43,445	927	18,110	24,967	1,209

In the Seventeen Principal Towns of Scotland, being those burghs which at the date of the 1961 Census had populations of over 30,000, there were registered during the week ended 10th October 1964, the births of 1,091 living children, and of 15 stillborn children, 797 marriages and 516 deaths. In the case of births, stillbirths and deaths the numbers are corrected to allow for usual residence. The equivalent annual birth-rate (living children only) is 22·1 per thousand of the population, the marriage-rate 16·1 and the death-rate 10·5. The number of stillbirths corresponds to a rate of 14 per thousand total births registered (including stillborn).

The birth-rate for the week is 0.4 more than in the previous week, and 0.8 above the five years' average. The marriage-rate is 3.3 more than in the previous week, and 2.3 above the average. The death-rate is 0.6 less than in the previous week, and 0.2 below the average.

The weekly death-rates in the individual towns ranged from 15.2 in Airdrie to 6.9 in Falkirk.

In Glasgow the rate was 11.2 and in Edinburgh 10.5.

There were no deaths from the principal epidemic diseases.

There were 120 deaths attributed to coronary thrombosis and 104 to malignant neoplasms, 30 of which were of the respiratory system.

Deaths from respiratory diseases (other than tubercular, influenzal and malignant) numbered 49, and equalled an annual death-rate from these causes of 1·0 per thousand. This death-rate is 0·3 more than in the previous week, and 0·2 above the average.

Deaths of children aged less than one year numbered 18, being 9 fewer than in the previous week. Of these, 12 were aged 0-6 days and none was aged 7-27 days. Deaths of persons aged sixty-five years and over numbered 316, and are 16 fewer than in the previous week.

Deaths due to violence numbered 16, and are 17 fewer than in the previous week.

The number of new claims to sickness benefit under the National Insurance Acts made at Local Offices of the Ministry of Pensions & National Insurance in Scotland during the week ended 6th October 1964, was 19,871. The number of such claims made at the Seventeen Principal Towns is shown on the last page of this return.

The mean temperature for the towns from which returns were received was  $48.6^{\circ}$ , being  $3.6^{\circ}$  below that for the previous week, and  $0.4^{\circ}$  below the average for the corresponding week in the period 1901-1930.

The mean rainfall was 1.34 inches, and the mean sunshine 21.7 hours.

Note.—The averages used for comparison are, except where otherwise stated, the mean of the comparable rates in the Principal Towns in the corresponding week of the five preceding years.

## WEEKLY RETURN OF THE REGISTRAR-GENERAL SCOTLAND

## BIRTHS, DEATHS AND MARRIAGES INFECTIOUS DISEASES NEW CLAIMS TO SICKNESS BENEFIT

## WEATHER REPORT

Week ended 17th October 1964

Vital Statistics totals from first week of the year\_17

THE VIEW ON ETY OF HER LINE OF HEALTH

	1	1	or week of the	yeur—17 tewns	LIBERRY
	Live Births	Stillbirths	Marriages	Total Deaths	Deaths under 1 year
1964	43,380	833	18,251	23,981	1,087
1963	43,348	898	18,254	26,822	1,150
1962	44,531	945	18,549	25,501	1,231

In the Seventeen Principal Towns of Scotland, being those burghs which at the date of the 1961 Census had populations of over 30,000, there were registered during the week ended 17th October 1964, the births of 1,051 living children, and of 23 stillborn children, 582 marriages and 587 deaths. In the case of births, stillbirths and deaths the numbers are corrected to allow for usual residence. The equivalent annual birth-rate (living children only) is 21·3 per thousand of the population, the marriage-rate 11·8 and the death-rate 11·9. The number of stillbirths corresponds to a rate of 21 per thousand total births registered (including stillborn).

The birth-rate for the week is 0.8 less than in the previous week, but 0.6 above the five years' average. The marriage-rate is 4.3 less than in the previous week, but 1.9 above the average. The death-rate is 1.4 more than in the previous week, and 1.2 above the average.

The weekly death-rates in the individual towns ranged from 15.5 in Motherwell and Wishaw to 6.3 in Perth.

In Glasgow the rate was 11.9 and in Edinburgh 12.3.

There was 1 death from the principal epidemic diseases—due to Meningococcal Septicaemia.

There were 148 deaths attributed to coronary thrombosis and 116 to malignant neoplasms, 26 of which were of the respiratory system.

Deaths from respiratory diseases (other than tubercular, influenzal and malignant) numbered 43, and equalled an annual death-rate from these causes of 0.9 per thousand. This death-rate is 0.1 less than in the previous week, but 0.2 above the average.

Deaths of children aged less than one year numbered 32, being 14 more than in the previous week. Of these, 21 were aged 0-6 days and 2 were aged 7-27 days. Deaths of persons aged sixty-five years and over numbered 368, and are 52 more than in the previous week.

Deaths due to violence numbered 31, and are 15 more than in the previous week.

The number of new claims to sickness benefit under the National Insurance Acts made at Local Offices of the Ministry of Pensions & National Insurance in Scotland during the week ended 13th October 1964, was 21,305. The number of such claims made at the Seventeen Principal Towns is shown on the last page of this return.

The mean temperature for the towns from which returns were received was  $44.8^{\circ}$ , being  $3.8^{\circ}$  below that for the previous week, and  $2.9^{\circ}$  below the average for the corresponding week in the period 1901-1930.

The mean rainfall was 0.69 inch, and the mean sunshine 16.4 hours.

Note.—The averages used for comparison are, except where otherwise stated, the mean of the comparable rates in the Principal Towns in the corresponding week of the five preceding years.

### WEEKLY RETURN OF THE REGISTRAR-GENERAL SCOTLAND

## BIRTHS. DEATHS AND MARRIAGES INFECTIOUS DISEASES

## NEW CLAIMS TO SICKNESS BENEFIT WEATHER REPORT

Week ended 24th October 1964

THE RUPAL SHOPETY for the Promotion OF HEALTH LIBRARY Vital Statistics totals from first week of the year-17 towns

		Live Births	Stillbirths	Marriages	Total Deaths	Deaths under 1 year
	1964	44,358	850	18,811	24,558	1,105
Ī	1963	44,305	924	18,786	27,333	1,169
	1962	45,516	967	19,139	26,020	1,255

N the Seventeen Principal Towns of Scotland, being those burghs which at the date of the 961 Census had populations of over 30,000, there were registered during the week ended 4th October 1964, the births of 978 living children, and of 17 stillborn children, 560 narriages and 577 deaths. In the case of births, stillbirths and deaths the numbers are orrected to allow for usual residence. The equivalent annual birth-rate (living children only) 19.8 per thousand of the population, the marriage-rate 11.3 and the death-rate 11.7. The number of stillbirths corresponds to a rate of 17 per thousand total births registered including stillborn).

The birth-rate for the week is 1.5 less than in the previous week, but 0.4 above the ive years' average. The marriage-rate is 0.5 less than in the previous week, but 1.1 above he average. The death-rate is 0.2 less than in the previous week, but 0.9 above the average.

The weekly death-rates in the individual towns ranged from 17.8 in Kirkcaldy to 4.9 n Paisley.

In Glasgow the rate was 12.1 and in Edinburgh 12.0.

There were no deaths from the principal epidemic diseases.

There were 117 deaths attributed to coronary thrombosis and 114 to malignant

eoplasms, 30 of which were of the respiratory system.

Deaths from respiratory diseases (other than tubercular, influenzal and malignant) numbered 48, and equalled an annual death-rate from these causes of 1.0 per thousand. This death-rate is 0.1 more than in the previous week, and 0.2 above the average.

Deaths of children aged less than one year numbered 18, being 14 fewer than in the previous week. Of these, 13 were aged 0-6 days and 1 was aged 7-27 days. Deaths of persons aged sixty-five years and over numbered 349, and are 19 fewer than in the previous veek.

Deaths due to violence numbered 20, and are 11 fewer than in the previous week.

The number of new claims to sickness benefit under the National Insurance Acts made it Local Offices of the Ministry of Pensions & National Insurance in Scotland during the week ended 20th October 1964, was 22,567. The number of such claims made at the Seventeen Principal Towns is shown on the last page of this return.

The mean temperature for the towns from which returns were received was 46.9°, being 2.1° above that for the previous week, and 1.1° above the average for the corresponding

week in the period 1901-1930.

The mean rainfall was 0.46 inch, and the mean sunshine 14.6 hours.

Vote.—The averages used for comparison are, except where otherwise stated, the mean of the comparable rates in the Principal Towns in the corresponding week of the five preceding years.

## WEEKLY RETURN OF THE REGISTRAR-GENERAL

## BIRTHS, DEATHS AND MARRIAGES INFECTIOUS DISEASES NEW CLAIMS TO SICKNESS BENEFIT

## WEATHER REPORT

Week ended 31st October 1964

THE ROYAL SOMETY for the fromotion 05 111 111

Vital Statistics totals from first week of the year-17 towns

	Live Births	Stillbirths	Marriages	Total Deaths	Deaths under 1 year
1964	45,351	870	19,334	25,108	1,124
1963	45,222	941	19,407	27,867	1,188
1962	46,498	988	19,727	26,607	1,281

N the Seventeen Principal Towns of Scotland, being those burghs which at the date of the 961 Census had populations of over 30,000, there were registered during the week ended 1st October 1964, the births of 993 living children, and of 20 stillborn children, 523 narriages and 550 deaths. In the case of births, stillbirths and deaths the numbers are orrected to allow for usual residence. The equivalent annual birth-rate (living children only) s 20.1 per thousand of the population, the marriage-rate 10.6 and the death-rate 11.1. The umber of stillbirths corresponds to a rate of 20 per thousand total births registered including stillborn).

The birth-rate for the week is 0.3 more than in the previous week, and 0.6 above the ive years' average. The marriage-rate is 0.7 less than in the previous week, and 0.1 below he average. The death-rate is 0.6 less than in the previous week, and 0.2 below the average.

The weekly death-rates in the individual towns ranged from 15.2 in Falkirk to 7.1 in Notherwell and Wishaw.

In Glasgow the rate was 11.7 and in Edinburgh 11.3.

There was 1 death from the principal epidemic diseases—due to influenza.

There were 126 deaths attributed to coronary thrombosis and 116 to malignant

eoplasms, 45 of which were of the respiratory system.

Deaths from respiratory diseases (other than tubercular, influenzal and malignant) umbered 49, and equalled an annual death-rate from these causes of 1.0 per thousand. his death-rate is the same as in the previous week, but 0.2 above the average.

Deaths of children aged less than one year numbered 19, being 1 more than in the revious week. Of these, 7 were aged 0-6 days and none was aged 7-27 days. Deaths of persons aged sixty-five years and over numbered 317, and are 32 fewer than in the previous reek.

Deaths due to violence numbered 24, and are 4 more than in the previous week.

The number of new claims to sickness benefit under the National Insurance Acts made t Local Offices of the Ministry of Pensions & National Insurance in Scotland during the veek ended 27th October 1964, was 22,525. The number of such claims made at the eventeen Principal Towns is shown on the last page of this return.

The mean temperature for the towns from which returns were received was 47.7°, being ·8° above that for the previous week, and 2·6° above the average for the corresponding

reek in the period 1901–1930.

The mean rainfall was 0.06 inch, and the mean sunshine 7.8 hours.

ote.—The averages used for comparison are, except where otherwise stated, the mean of the comparable rates in the Principal Towns in the corresponding week of the five preceding years.

## WEEKLY RETURN OF THE REGISTRAR-GENERAL SCOTLAND

## BIRTHS, DEATHS AND MARRIAGES INFECTIOUS DISEASES NEW CLAIMS TO SICKNESS BENEFIT

WEATHER REPORT

Week ended 7th November 1964

Wital Statistics totals from fust week of the

THE BOYAL SOCIETY

for the Unitation

OF MEACTH

	- Thui Stutistic	s totals from fil	si week of the	yeur—17 towns	lil Dist. In
	Live Births	Stillbirths	Marriages	Total Deaths	Deaths under 1 year
1964	46,295	891	19,824	25,680	1,145
1963	46,172	970	19,701	28,431	1,221
1962	47,412	999	19,998	27,204	1,309

In the Seventeen Principal Towns of Scotland, being those burghs which at the date of the 1961 Census had populations of over 30,000, there were registered during the week ended 7th November 1964, the births of 944 living children, and of 21 stillborn children, 490 marriages and 572 deaths. In the case of births, stillbirths and deaths the numbers are corrected to allow for usual residence. The equivalent annual birth-rate (living children only) is 19·1 per thousand of the population, the marriage-rate 9·9 and the death-rate 11·6. The number of stillbirths corresponds to a rate of 22 per thousand total births registered (including stillborn).

The birth-rate for the week is 1.0 less than in the previous week, but 0.7 above the five years' average. The marriage-rate is 0.7 less than in the previous week, but 4.0 above the average. The death-rate is 0.5 more than in the previous week, and 0.2 above the average.

The weekly death-rates in the individual towns ranged from 15·2 in Perth to 7·6 in Coatbridge and Airdrie.

In Glasgow the rate was 11.7 and in Edinburgh 11.7.

There was 1 death from the principal epidemic diseases—due to measles.

There were 143 deaths attributed to coronary thrombosis and 116 to malignant neoplasms, 36 of which were of the respiratory system.

Deaths from respiratory diseases (other than tubercular, influenzal and malignant) numbered 39, and equalled an annual death-rate from these causes of 0.8 per thousand.

This death-rate is 0.2 less than in the previous week, and 0.1 below the average.

Deaths of children aged less than one year numbered 21, being 2 more than in the previous week. Of these, 12 were aged 0-6 days and 1 was aged 7-27 days. Deaths of persons aged sixty-five years and over numbered 373, and are 56 more than in the previous

Deaths due to violence numbered 32, and are 8 more than in the previous week.

The number of new claims to sickness benefit under the National Insurance Acts made at Local Offices of the Ministry of Pensions & National Insurance in Scotland during the week ended 3rd November 1964, was 21,610. The number of such claims made at the Seventeen Principal Towns is shown on the last page of this return.

The mean temperature for the towns from which returns were received was  $43.5^{\circ}$ , being  $4.2^{\circ}$  below that for the previous week, but  $1.0^{\circ}$  above the average for the corresponding

week in the period 1901–1930.

The mean rainfall was 0.01 inch, and the mean sunshine 9.0 hours.

Note.—The averages used for comparison are, except where otherwise stated, the mean of the comparable rates in the Principal Towns in the corresponding week of the five preceding years.

### BIRTHS, DEATHS AND MARRIAGES INFECTIOUS DISEASES CLAIMS TO SICKNESS BENEFIT NEW

WEATHER REPORT

THE ROYAL SOCIETY for the Promotion OF HEALTH

Week ended 14th November 1964

Vital Statistics totals from first week of the year-17 towns LIBRARY

				The state of the state of	
_	Live Births	Stillbirths	Marriages	Total Deaths	Deaths under 1 year
1964	47,152	913	20,091	26,380	1,172
1963	47,060	981	19,919	29,000	1,253
1962	48, 40	1,029	20,227	27,735	1,327

N the Seventeen Principal Towns of Scotland, being those burghs which at the date of the 961 Census had populations of over 30,000, there were registered during the week ended 4th November 1964, the births of 857 living children, and of 22 stillborn children, 267 narriages and 700 deaths. In the case of births, stillbirths and deaths the numbers are orrected to allow for usual residence. The equivalent annual birth-rate (living children only) 17.4 per thousand of the population, the marriage-rate 5.4 and the death-rate 14.2. The umber of stillbirths corresponds to a rate of 25 per thousand total births registered including stillborn).

The birth-rate for the week is 1.7 less than in the previous week, and 0.6 below the ive years' average. The marriage-rate is 4.5 less than in the previous week, but 0.8 above he average. The death-rate is 2.6 more than in the previous week, and 2.4 above the average.

The weekly death-rates in the individual towns ranged from 18.1 in Hamilton to 7.3 in lydebank.

In Glasgow the rate was 15.7 and in Edinburgh 13.3.

There was 1 death from the principal epidemic diseases—due to influenza.

There were 153 deaths attributed to coronary thrombosis and 142 to malignant

eoplasms, 44 of which were of the respiratory system.

Deaths from respiratory diseases (other than tubercular, influenzal and malignant) numbered 88, and equalled an annual death-rate from these causes of 1.8 per thousand. This death-rate is 1.0 more than in the previous week, and 0.8 above the average.

Deaths of children aged less than one year numbered 27, being 6 more than in the revious week. Of these, 12 were aged 0-6 days and 4 were aged 7-27 days. Deaths of ersons aged sixty-five years and over numbered 429, and are 56 more than in the previous

Deaths due to violence numbered 19, and are 13 fewer than in the previous week.

The number of new claims to sickness benefit under the National Insurance Acts made t Local Offices of the Ministry of Pensions & National Insurance in Scotland during the reek ended 10th November 1964, was 22,489. The number of such claims made at the eventeen Principal Towns is shown on the last page of this return.

The mean temperature for the towns from which returns were received was 41.3° being ·2° below that for the previous week, and 0·3° below the average for the corresponding

reek in the period 1901–1930.

The mean rainfall was 1.01 inches, and the mean sunshine 15.0 hours.

ote.—The averages used for comparison are, except where otherwise stated, the mean of the comparable rates in the Principal Towns in the corresponding week of the five preceding years.

### BIRTHS, DEATHS AND MARRIAGES

### CLAIMS TO SICKNESS NEW WEATHER REPORT

INFECTIOUS DISEASESHE ROYAL SOCIETY BENEFITTOLION OF HEALTH LIBRARY

Week ended 21st November 1964

Vital Stati	stics totals	from first	week of the	year-17	towns
-------------	--------------	------------	-------------	---------	-------

•	Live Births	Stillbirths	Marriages	Total Deaths	Deaths under 1 year
1964	48,155	927	20,324	27,059	1,203
1963	47,980	1,006	20,131	29,614	1,274
1962	49,297	1,048	20,466	28,364	1,350

In the Seventeen Principal Towns of Scotland, being those burghs which at the date of the 1961 Census had populations of over 30,000, there were registered during the week ended 21st November 1964, the births of 1,003 living children, and of 14 stillborn children, 233 marriages and 679 deaths. In the case of births, stillbirths and deaths the numbers are corrected to allow for usual residence. The equivalent annual birth-rate (living children only) is 20.3 per thousand of the population, the marriage-rate 4.7 and the death-rate 13.8. The number of stillbirths corresponds to a rate of 14 per thousand total births registered (including stillborn).

The birth-rate for the week is 2.9 more than in the previous week, and 1.3 above the five years' average. The marriage-rate is 0.7 less than in the previous week, and 2.1 below the average. The death-rate is 0.4 less than in the previous week, but 1.4 above the average.

The weekly death-rates in the individual towns ranged from 18.8 in Kirkcaldy to 5.4 in Kilmarnock.

In Glasgow the rate was 15.0 and in Edinburgh 14.9.

There were 2 deaths from the principal epidemic diseases—1 was due to influenza and 1 to meningococcal septicaemia.

There were 132 deaths attributed to coronary thrombosis and 117 to malignant neoplasms, 42 of which were of the respiratory system.

Deaths from respiratory diseases (other than tubercular, influenzal and malignant) numbered 83, and equalled an annual death-rate from these causes of 1.7 per thousand. This death-rate is 0.1 less than in the previous week, but 0.5 above the average.

Deaths of children aged less than one year numbered 31, being 4 more than in the previous week. Of these, 14 were aged 0-6 days and 2 were aged 7-27 days. Deaths of persons aged sixty-five years and over numbered 440, and are 11 more than in the previous

Deaths due to violence numbered 43, and are 24 more than in the previous week.

The number of new claims to sickness benefit under the National Insurance Acts made at Local Offices of the Ministry of Pensions & National Insurance in Scotland during the week ended 17th November 1964, was 26,398. The number of such claims made at the Seventeen Principal Towns is shown on the last page of this return.

The mean temperature for the towns from which returns were received was 45.5° being  $4\cdot2^{\circ}$  above that for the previous week, and  $5\cdot2^{\circ}$  above the average for the corresponding

week in the period 1901-1930.

The mean rainfall was 0.89 inch, and the mean sunshine 10.9 hours.

Note.—The averages used for comparison are, except where otherwise stated, the mean of the comparable rates in the Principal Towns in the corresponding week of the five preceding years.

### BIRTHS, DEATHS AND MARRIAGES INFECTIOUS DISEASES NEW CLAIMS TO SICKNESS BENEFIT WEATHER REPORT

Week ended 28th November 1964

THE ROPLE SPRCIETY for the Promotion OF HEALTH LIBRARY

	That Statistic	- Totals from fi	isi week of the	yeur—17 towns	The state of the s
	Live Births	Stillbirths	Marriages	Total Deaths	Deaths under 1 year
1964	49,087	941	20,605	27,636	1,227
1963	48,959	1,027	20,396	30,240	1,302
1962	50,315	1,074	20,749	29,015	1,382

In the Seventeen Principal Towns of Scotland, being those burghs which at the date of the 1961 Census had populations of over 30,000, there were registered during the week ended 28th November 1964, the births of 932 living children, and of 14 stillborn children, 281 marriages and 577 deaths. In the case of births, stillbirths and deaths the numbers are corrected to allow for usual residence. The equivalent annual birth-rate (living children only) is 18.9 per thousand of the population, the marriage-rate 5.7 and the death-rate 11.7. The number of stillbirths corresponds to a rate of 15 per thousand total births registered (including stillborn).

The birth-rate for the week is 1.4 less than in the previous week, and 0.6 below the five years' average. The marriage-rate is 1.0 more than in the previous week, but 0.2 below the average. The death-rate is 2·1 less than in the previous week, and 1·1 below the average.

The weekly death-rates in the individual towns ranged from 19.3 in Hamilton to 6.3 in Greenock.

In Glasgow the rate was 11.9 and in Edinburgh 12.3.

There were no deaths from the principal epidemic diseases.

Vital Statistics totals from first

There were 125 deaths attributed to coronary thrombosis and 101 to malignant neoplasms, 29 of which were of the respiratory system.

Deaths from respiratory diseases (other than tubercular, influenzal and malignant) numbered 74, and equalled an annual death-rate from these causes of 1.5 per thousand. This death-rate is 0.2 less than in the previous week, but 0.2 above the average.

Deaths of children aged less than one year numbered 24, being 7 fewer than in the previous week. Of these, 8 were aged 0-6 days and none was aged 7-27 days. Deaths of persons aged sixty-five years and over numbered 372, and are 68 fewer than in the previous

Deaths due to violence numbered 30, and are 13 fewer than in the previous week.

The number of new claims to sickness benefit under the National Insurance Acts made at Local Offices of the Ministry of Pensions & National Insurance in Scotland during the week ended 24th November 1964, was 24,513. The number of such claims made at the Seventeen Principal Towns is shown on the last page of this return.

The mean temperature for the towns from which returns were received was 45.0° being 0.5° below that for the previous week, but 3.9° above the average for the corresponding

week in the period 1901–1930.

The mean rainfall was 0.72 inch, and the mean sunshine 9.7 hours.

Note.—The averages used for comparison are, except where otherwise stated, the mean of the comparable rates in the Principal Towns in the corresponding week of the five preceding years.

### BIRTHS, DEATHS AND MARRIAGES INFECTIOUS DISEASES

### NEW CLAIMS TO SICKNESS BENEFIT WEATHER REPORT

Week ended 5th December 1964

THE ROYAL MOMETY for the Promotion OF MEALTH

Vital Statistics totals from first week of the year-17 towns

LIBRARY

	Live Births	Stillbirths	Marriages	Total Deaths	Deaths under 1 year
1964	50,035	953	20,887	28,237	1,252
1963	49,869	1,047	20,698	30,885	1,339
1962	51,245	1,101	21,030	29,715	1,421

In the Seventeen Principal Towns of Scotland, being those burghs which at the date of the 1961 Census had populations of over 30,000, there were registered during the week ended 5th December 1964, the births of 948 living children, and of 12 stillborn children, 282 narriages and 601 deaths. In the case of births, stillbirths and deaths the numbers are corrected to allow for usual residence. The equivalent annual birth-rate (living children only) is 19·2 per thousand of the population, the marriage-rate 5·7 and the death-rate 12·2. The number of stillbirths corresponds to a rate of 13 per thousand total births registered (including stillborn).

The birth-rate for the week is 0.3 more than in the previous week, and 0.7 above the five years' average. The marriage-rate is the same as in the previous week, but 0.5 below the average. The death-rate is 0.5 more than in the previous week, but 0.8 below the average.

The weekly death-rates in the individual towns ranged from 19.6 in Ayr to 8.3 in Dunfermline.

In Glasgow and in Edinburgh the rate was 12.1

There were 2 deaths from the principal epidemic diseases due to meningococcal septicaemia.

There were 159 deaths attributed to coronary thrombosis and 106 to malignant

neoplasms, 22 of which were of the respiratory system.

Deaths from respiratory diseases (other than tubercular, influenzal and malignant) numbered 56, and equalled an annual death-rate from these causes of 1·1 per thousand. This death-rate is 0·4 less than in the previous week, and 0·3 below the average.

Deaths of children aged less than one year numbered 25, being 1 more than in the previous week. Of these, 15 were aged 0-6 days and 1 was aged 7-27 days. Deaths of persons aged sixty-five years and over numbered 355, and are 17 fewer than in the previous week.

Deaths due to violence numbered 26, and are 4 fewer than in the previous week.

The number of new claims to sickness benefit under the National Insurance Acts made at Local Offices of the Ministry of Pensions & National Insurance in Scotland during the week ended 1st December 1964, was 22,229. The number of such claims made at the Seventeen Principal Towns is shown on the last page of this return.

The mean temperature for the towns from which returns were received was 36.6° being 3.4° below that for the previous week, and 4.0° below the average for the corresponding

week in the period 1901–1930.

The mean rainfall was 0.51 inch, and the mean sunshine 13.0 hours.

Vote.—The averages used for comparison are, except where otherwise stated, the mean of the comparable rates in the Principal Towns in the corresponding week of the five preceding years.

## BIRTHS, DEATHS AND MARRIAGES INFECTIOUS DISEASES NEW CLAIMS TO SICKNESS BENEFIT WEATHER REPORT

### Week ended 12th December 1964

Vital Statistics totals from first week of the year—17 towns

	Live Births	Stillbirths	Marriages	Total Deaths	Deaths under 1 year
1964	50,990	967	21,182	28,816	1,269
1963	50,787	1,065	20,960	31,545	1,370
1962	52,206	1,122	21,264	30,347	1,452

the Seventeen Principal Towns of Scotland, being those burghs which at the date of the 61 Census had populations of over 30,000, there were registered during the week ended the December 1964, the births of 955 living children, and of 14 stillborn children, 295 arriages and 579 deaths. In the case of births, stillbirths and deaths the numbers are prected to allow for usual residence. The equivalent annual birth-rate (living children only) 19·3 per thousand of the population, the marriage-rate 6·0 and the death-rate 11·7. The umber of stillbirths corresponds to a rate of 14 per thousand total births registered neluding stillborn).

The birth-rate for the week is 0.1 more than in the previous week, and 0.3 above the ve years' average. The marriage-rate is 0.3 more than in the previous week, and 0.7 above the average. The death-rate is 0.5 less than in the previous week, and 2.0 below the verage.

The weekly death-rates in the individual towns ranged from 14.6 in Dunfermline to 5.7 Coatbridge.

In Glasgow the rate was 12.3 and in Edinburgh 11.2

There were 2 deaths from the principal epidemic diseases—1 was due to measles and to influenza.

There were 120 deaths attributed to coronary thrombosis and 104 to malignant eoplasms, 33 of which were of the respiratory system.

Deaths from respiratory diseases (other than tubercular, influenzal and malignant) umbered 53, and equalled an annual death-rate from these causes of 1·1 per thousand. his death-rate is the same as in the previous week, but 0·5 below the average.

Deaths of children aged less than one year numbered 17, being 8 fewer than in the revious week. Of these, 10 were aged 0-6 days and none was aged 7-27 days. Deaths of ersons aged sixty-five years and over numbered 395, and are 40 more than in the previous reek.

Deaths due to violence numbered 38, and are 12 more than in the previous week.

The number of new claims to sickness benefit under the National Insurance Acts made t Local Offices of the Ministry of Pensions & National Insurance in Scotland during the reek ended 8th December 1964, was 21,068. The number of such claims made at the eventeen Principal Towns is shown on the last page of this return.

The mean temperature for the towns from which returns were received was  $43.7^{\circ}$  being  $1^{\circ}$  above that for the previous week, and  $4.3^{\circ}$  above the average for the corresponding

eek in the period 1901-1930.

The mean rainfall was 2.17 inches, and the mean sunshine 9.8 hours.

ote.—The averages used for comparison are, except where otherwise stated, the mean of the comparable rates in the Principal Towns in the corresponding week of the five preceding years.

## BIRTHS, DEATHS AND MARRIAGES INFECTIOUS DISEASES NEW CLAIMS TO SICKNESS BENEFIT WEATHER REPORT

### Week ended 19th December 1964

Vital Statistics totals from first week of the year-17 towns

-						
ì		Live Births	Stillbirths	Marriages	Total Deaths	Deaths under 1 year
	1964	51,935	981	21,451	29,471	1,292
- 02-	1963	51,769	1,080	21,253	32,223	1,406
	1962	53,156	1,144	21,550	31,056	1,478

Note Seventeen Principal Towns of Scotland, being those burghs which at the date of the 961 Census had populations of over 30,000, there were registered during the week ended 9th December 1964, the births of 945 living children, and of 14 stillborn children, 269 narriages and 655 deaths. In the case of births, stillbirths and deaths the numbers are orrected to allow for usual residence. The equivalent annual birth-rate (living children only) s 19·1 per thousand of the population, the marriage-rate 5·4 and the death-rate 13·3. The number of stillbirths corresponds to a rate of 15 per thousand total births registered including stillborn).

The birth-rate for the week is 0.2 less than in the previous week, but 0.4 above the ive years' average. The marriage-rate is 0.6 less than in the previous week, and 0.7 below he average. The death-rate is 1.6 more than in the previous week, but 0.5 below the yerage.

The weekly death-rates in the individual towns ranged from 24.9 in Kilmarnock to 9.1 n Airdrie.

In Glasgow the rate was 12.1 and in Edinburgh 15.0

There were 3 deaths from the principal epidemic diseases—1 was due to meningococcal epticaemia and 2 were due to influenza.

There were 149 deaths attributed to coronary thrombosis and 122 to malignant

eoplasms, 32 of which were of the respiratory system.

Deaths from respiratory diseases (other than tubercular, influenzal and malignant) umbered 61, and equalled an annual death-rate from these causes of 1·2 per thousand. his death-rate is 0·1 more than in the previous week, but 0·4 below the average.

Deaths of children aged less than one year numbered 23, being 6 more than in the revious week. Of these, 9 were aged 0-6 days and 5 were aged 7-27 days. Deaths of ersons aged sixty-five years and over numbered 394, and are 1 fewer than in the previous week

Deaths due to violence numbered 38, and are the same as in the previous week.

The number of new claims to sickness benefit under the National Insurance Acts made t Local Offices of the Ministry of Pensions & National Insurance in Scotland during the reck ended 15th December 1964, was 20,324. The number of such claims made at the eventeen Principal Towns is shown on the last page of this return.

The mean temperature for the towns from which returns were received was  $37.6^{\circ}$  being  $1^{\circ}$  below that for the previous week, and  $1.6^{\circ}$  below the average for the corresponding teek in the period 1901–1930.

The mean rainfall was 0.35 inch, and the mean sunshine 8.2 hours.

ote.—The averages used for comparison are, except where otherwise stated, the mean of the comparable rates in the Principal Towns in the corresponding week of the five preceding years.

## BIRTHS, DEATHS AND MARRIAGES INFECTIOUS DISEASES NEW CLAIMS TO SICKNESS BENEFIT WEATHER REPORT

### Week ended 26th December 1964

_		Vital Statistic	cs totals from fi	rst week of the	year—17 towns	7
		Live Births	Stillbirths	Marriages	Total Deaths	Deaths under 1 year
	1964	52,684	995	21,764	30,074	1,321
	1963	52,694	1,095	21,666	32,993	1,448
	1962	54,053	1,161	22,027	31,708	1,518

N the Seventeen Principal Towns of Scotland, being those burghs which at the date of the 1961 Census had populations of over 30,000, there were registered during the week ended 26th December 1964, the births of 749 living children, and of 14 stillborn children, 313 narriages and 603 deaths. In the case of births, stillbirths and deaths the numbers are corrected to allow for usual residence. The equivalent annual birth-rate (living children only) s 15·2 per thousand of the population, the marriage-rate 6·3 and the death-rate 12·2. The number of stillbirths corresponds to a rate of 18 per thousand total births registered including stillborn).

The birth-rate for the week is 3.9 less than in the previous week, and 2.5 below the ive years' average. The marriage-rate is 0.9 more than in the previous week, but 3.2 below the average. The death-rate is 1.1 less than in the previous week, and 2.2 below the average.

The weekly death-rates in the individual towns ranged from 17.7 in Dunfermline to 5.1 Perth.

In Glasgow the rate was 12.2 and in Edinburgh 12.8

veek.

There was 1 death from the principal epidemic diseases—due to measles.

There were 136 deaths attributed to coronary thrombosis and 108 to malignant reoplasms, 31 of which were of the respiratory system.

Deaths from respiratory diseases (other than tubercular, influenzal and malignant) numbered 58, and equalled an annual death-rate from these causes of 1·2 per thousand. This death-rate is the same as in the previous week, but 0·5 below the average.

Deaths of children aged less than one year numbered 29, being 6 more than in the previous week. Of these, 14 were aged 0-6 days and 1 was aged 7-27 days. Deaths of persons aged sixty-five years and over numbered 385, and are 9 fewer than in the previous

Deaths due to violence numbered 24, and are 14 fewer than in the previous week.

The number of new claims to sickness benefit under the National Insurance Acts made it Local Offices of the Ministry of Pensions & National Insurance in Scotland during the week ended 22nd December 1964, was 17,643. The number of such claims made at the Seventeen Principal Towns is shown on the last page of this return.

The mean temperature for the towns from which returns were received was  $34 \cdot 2^{\circ}$  being  $1 \cdot 4^{\circ}$  below that for the previous week, and  $4 \cdot 7^{\circ}$  below the average for the corresponding week in the period 1901-1930.

The mean rainfall was 0.27 inch, and the mean sunshine 8.7 hours.

lote.—The averages used for comparison are, except where otherwise stated, the mean of the comparable rates in the Principal Towns in the corresponding week of the five preceding years.

## BIRTHS, DEATHS AND MARRIAGES INFECTIOUS DISEASES NEW CLAIMS TO SICKNESS BENEFIT

WEATHER REPORT

THE ROYAL SOCIETY
for the Promotion

OF HEALTH

Week ended 2nd January 1965

Vital Statistics totals from first week of the year-17 towns LIBRARY

	Live Births	Stillbirths	Marriages	Total Deaths	Deaths under 1 year
1965	840	21	437	721	23
1964	853	9	457	775	44
1963	969	18	448	793	34

In the Seventeen Principal Towns of Scotland, being those burghs which at the date of the 1961 Census had populations of over 30,000, there were registered during the week ended 2nd January 1965, the births of 840 living children, and of 21 stillborn children, 437 marriages and 721 deaths. In the case of births, stillbirths and deaths the numbers are corrected to allow for usual residence. The equivalent annual birth-rate (living children only) is 17-0 per thousand of the population, the marriage-rate 8-9 and the death-rate 14-6. The number of stillbirths corresponds to a rate of 24 per thousand total births registered (including stillborn).

The birth-rate for the week is 1.8 more than in the previous week, but 0.7 below the five years' average. The marriage-rate is 2.6 more than in the previous week, but 0.6 below the average. The death-rate is 2.4 more than in the previous week, and 0.2 above the average.

The weekly death-rates in the individual towns ranged from 22.9 in Hamilton to 9.1 in Airdrie.

In Glasgow the rate was 14.1 and in Edinburgh 15.9.

There were 2 deaths from the principal epidemic diseases—1 was due to influenza and

There were 188 deaths attributed to coronary thrombosis and 117 to malignant neoplasms, 44 of which were of the respiratory system.

Deaths from respiratory diseases (other than tubercular, influenzal and malignant) numbered 88, and equalled an annual death-rate from these causes of 1.8 per thousand. This death-rate is 0.6 more than in the previous week, and 0.1 above the average.

Deaths of children aged less than one year numbered 23, being 6 fewer than in the previous week. Of these, 13 were aged 0-6 days and 3 were aged 7-27 days. Deaths of persons aged sixty-five years and over numbered 482, and are 97 more than in the previous week.

Deaths due to violence numbered 22, and are 2 fewer than in the previous week.

The number of new claims to sickness benefit under the National Insurance Acts made at Local Offices of the Ministry of Pensions & National Insurance in Scotland during the week ended 29th December 1964, is not available. This will be included in next week's return

The mean temperature for the towns from which returns were received was 35.0° being 3.8° above that for the previous week, but 1.9° below the average for the corresponding week in the period 1901–1930.

The mean rainfall was 1.22 inches, and the mean sunshine 9.3 hours.

Vote.—The averages used for comparison are, except where otherwise stated, the mean of the comparable rates in the Principal Towns in the corresponding week of the five preceding years.
